PD4-6604 & PD4-6608 Loop-Powered Meters
Instruction Manual

Loop Leader+ Series

CE — All Models

⟨Ex⟩ IECEx — PD4-6608 Only

- Large Display NEMA 4X, IP65 Loop-Powered Wall & Pipe Mounted Meters
- 4-20 mA Input Displayed with ±0.02% FS Accuracy
- 2.1 Volt Drop Maximum
- 2.8" (71 mm) 5 Alphanumeric 14-Segment Characters Top Display
- 1.5" (39 mm) 8 Alphanumeric 14-Segment Characters Bottom Display
- 20-Segment Bargraph with Numeric Percent Indication
- (2) Open Collector Outputs Standard; Assignable to Pulse, Alarm, Timer, or Stopwatch
- (2) Optional Loop-Powered Solid-State Relays; Assignable to Alarm, Control, Timer, or Stopwatch
- Stopwatch & Timer Functions to Drive Relays & Open Collectors
- Optional Isolated 4-20 mA Analog Output
- Relay Pump Alternation Based on Level and Runtime
- Display Relay Runtime & Cycle Count via Relay Info Menu
- Round Horizontal Tank Function; Just Enter Diameter & Length
- 32-Point Linearization, Square Root Extraction and Programmable Exponent Function
- Free PC-Based MeterView XL USB Programming Software
- HART® Protocol Transparent
- Externally DC Powered Backlight with Red Backlight for Alarm Conditions
- Safe Area Operating Temperature Range: -40 to 75°C (-40 to 167°F)
- Conformal Coated PCBs for Dust & Humidity Protection
- Password Protection
- ATEX and IECEx Certified as Intrinsically Safe (PD4-6608 Only)
- Pipe Mounting Kit Available
- Light / Horn & Reset Button Accessory
- Control Station Accessory for Remote Operation of Instrument
- 3-Year Warranty

Introduction

The Loop Leader+ PD4-6600 Series of loop-powered large display meters can be installed virtually anywhere to provide convenient and informative display of any 4-20 mA signal. One of the most convenient features of these instruments is their large, dual line display which is typically used to display the process variable on the 2.8" 5-character alphanumeric top display and the units of measure or a tag on the 1.5" 8-character alphanumeric bottom display. Another common setup is to display the input in one scale on the top display (such as feet) and in another scale on the bottom display (such as gallons). Both display lines use 14-segment, alphanumeric characters that provide much clearer indication of tags, units, or alarm messages than 7-segment characters do.

Further enhancing the display on these instruments is a 20-segment bargraph that also includes a numeric value of the percentage the bargraph represents.

These loop-powered meters can be installed virtually anywhere because they get their power from the 4-20 mA loop and therefore require no separate power source and they only have a voltage drop of 1.5 V, so they add very little burden to the loop. Additional features that allow these instruments to be installed virtually anywhere include a NEMA 4X, IP65 rated enclosure, an operating temperature range of -40 to 167°F (-40 to 75°C) (for safe area products), conformally coated PCBs, and a backlit LCD that can be read in bright sunlight or dimly lit areas. The PD4-6608 model is an intrinsically safe and nonincendive version of the Loop Leader+ that is agency approved for installation in hazardous areas. It also carries electrical safety approvals.

Free, PC-based, MeterView XL software that connects to the meter via a USB cable is available for programming and setup of the meters.

To download the latest MeterView XL programming software and manual, visit predig.com/meterviewxl.

All models come equipped with two open collector outputs and remote contacts. There are also models available with two solid-state relays and isolated 4-20 mA analog output options. The open collector outputs are useful for alarm indication. The remote contacts can be used to remotely operate the four programming buttons, to acknowledge the relays, to start/stop a timer/stopwatch, and more. The relays can be programmed for alarm indication, on/off control, or pump alternation.

1. Available on PD4-6604 only. Requires external 24 VDC power.

Large Informative Display

One of the most convenient features of the PD4 Loop Leader+ Series is its large, dual line display. The PD4's whopping 2.8" 5-character alphanumeric top display and 1.5" 8-character alphanumeric bottom display, plus a 20-segment bargraph with percentage indication on top, makes reading and understanding process values easier than ever.

Predefined display units give users even more display flexibility. Plus, the high contrast backlit LCD display is readable from far away and under various lighting conditions.

Backlight Turns Red on Alarm

When an alarm occurs, the display can be programmed to turn red and flash. In addition, a unique custom alarm message for each of the two relays and two open collectors can be displayed on the bottom display. These features can be activated even if no relay or open collector is connected.

Dual-Scale Feature

Users can use the dual-scale feature to display the input in two different scales. For instance, the example above shows an application where the display shows the input in feet and gallons while the display toggles between process values and units.
14-Segment Characters

Notice how much better letters like "T", "N" and "K" appear as 14-segment characters on the Loop Leader+ vs 7-segment characters found on many other meters.

Predefined and Custom Units

The meter has six available preprogrammed unit classes: volume, height, temperature, pressure, weight, and rate. When the desired unit class or unit of measure within a class is not available, a custom unit may be programmed.

Password Protection

A password can be set up for programming security to prevent unauthorized changes to the programmed parameter settings.

Remote Contacts

Remote Contacts are standard on the PD4 and the meter can be operated via a remote control station (PDA2364-MRUE). The PDA2364-MRUE mimics the PD4 meter's four programming buttons: Menu, Right Arrow, Up Arrow, and Enter.

Multiple Outputs

- Two open collector outputs (standard)
- Two solid-state relays (optional)
- One 4-20 mA output (optional)

The open collector outputs and relays generally operate in the same manner, with the major exception being the open collectors are not available for pump alternation and the relays are not available with pulse features. The open collectors and relays can be controlled either automatically or manually.

The isolated analog output signal can be configured to represent the process variable (PV1, PV2, or retransmit). It can also be reverse scaled such that the meter's high calibration value outputs 4 mA and the meter's low calibration outputs 20 mA.

Pump Alternation (ALTERN)

The PD4-6604 and PD4-6608 can be used as a pump controller to alternate two pumps and indicate high and low alarm conditions. The pumps can be programmed to alternate on level and runtime and the display can be programmed to turn red and flash a message on alarm conditions. The meter can display the pump runtimes and the number of times they have cycled.

See the *Pump Control with Alternation & Alarm Example* on page *50* for full details.

Relay #2 turns the main pump on at 6000 gallons and turns it off at 1000 gallons.
With the Pump Alternation feature activated, the next time the level reaches 6000 gallons, relay #1 transfers and starts the backup pump.

Input Signal Conditioning Functions (𝖥𝖴𝖭𝖢𝖳𝖨𝖮𝖭)

The *Function* menu is used to select the input signal conditioner applied to the input: linear, square root, programmable exponent, or round horizontal tank volume calculation. Multi-point linearization is part of the linear function selection.

Meters are set up at the factory for linear function with 2-point linearization. The linear function provides a display that is linear with respect to the input signal.

Square Root Linearization (𝖲𝖰𝖱𝖮𝖮𝖳)

The square root function can be used to linearize the signal from a differential pressure transmitter and display flow rate in engineering units.

PD4-6604 Displaying Flow Rate by Applying the Square Root Function to the Output of a DP Transmitter.

Programmable Exponent Linearization (𝖤𝖷𝖯𝖮𝖭𝖤𝖭𝖳)

The programmable exponent can be used to linearize the signal from level transmitters in open-channel flow applications using weirs and flumes.

The PD4-6604, in combination with an ultrasonic level transmitter, makes for an economical way to measure and display open channel flow rate in most weirs and flumes. A guide such as the ISCO Open Channel Flow Measurement Handbook can provide the user with all the information needed: the exponent used in the flow equation for the desired flow units and the flow rate for any given head height. For example, to display the open channel flow rate from a 3" Parshall flume, the ISCO handbook advises the exponent is 1.547 and at the maximum head height of 3.0 feet, the flow rate is 3.508 MGD.

Round Horizontal Tank Linearization (𝖱𝖧 𝖳𝖠𝖭𝖪)

This function automatically calculates the volume in a round horizontal tank with flat ends and allows that reading to be displayed on the bottom display. This results in a meter that displays the height of the tank on the top display and volume on the lower display. The user only needs to enter the diameter and length of the tank and meter takes care of the rest.

Set the display for the desired decimal point and engineering units before entering the round horizontal tank function. Select units (inches or cm) for the tank dimensions. Enter the diameter and the length in inches or cm and the results will be calculated automatically in US gallons or liters. The unit of measure for the volume can be changed using the display menu.
PD4-6604 Displaying Height in Feet and Volume in Gallons in a Round Horizontal Tank Using the RHT Linearization Feature.

PDA2360	Plastic Control Stations

PDA2360 Plastic Control Stations

Model	Description
PDA2360-E	Emergency Button
PDA2361-A	Ack Button
PDA2361-B	Blank Button
PDA2361-R	Reset Button
PDA2361-T	Tare Button
PDA2361-S	Stop Button
PDA2361-Q	Silence Button
PDA2362-AR	Ack and Reset Buttons
PDA2362-BB	Two Blank Buttons
PDA2364-MRUE	Menu, Right, Up, Enter Buttons

Notes:

1. These control stations do not carry hazardous area approvals and are thus not suitable for location in hazardous areas. The use of additional protective devices may allow them to be installed in a safe area and connected to a device in a hazardous area. User should consult a professional engineer to determine suitability of these products for their specific application.

2. Control stations can be connected directly to the PD4 meter's Remote Contacts. See *Remote Operation of Meter* on page *25* for details.

Light / Horn & Button Accessories[2]
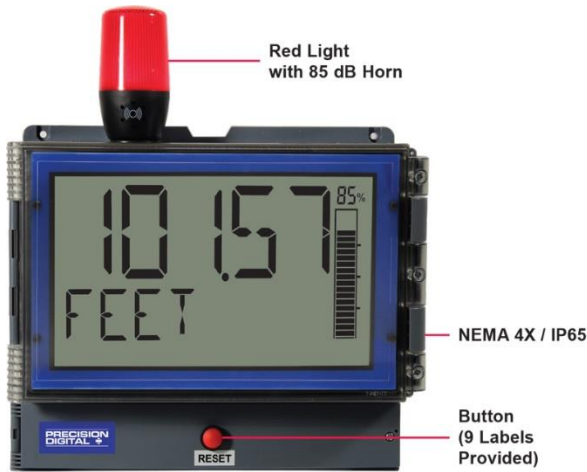

PD4-6604 meter shown with MOD-PD2LHRB1 Red Light / Horn and Button. Meter sold separately.

Model	Description
MOD-PD2LHRB1	Red Light / Horn and Button Mounted and Wired to PD4[1]
MOD-PD2LHGB1	Green Light / Horn and Button Mounted and Wired to PD4 [1]
MOD-PD2LHYB1	Yellow Light / Horn and Button Mounted and Wired to PD4 [1]
MOD-PD2LHBB1	Blue Light / Horn and Button Mounted and Wired to PD4 [1]
MOD-PD2LHWB1	White Light / Horn and Button Mounted and Wired to PD4 [1]

Note:

1. Specify MOD-PD2LH model as a separate item on the order for the PD4 meter to order the Light / Horn & Button accessory installed and wired. Meter is sold separately.
2. Light / Horn & Button accessory available only on PD4-6604 units.

Each Light / Horn accessory comes with 9 labels for the button.

Pipe Mounting Kit

PD4-6604 Meter Shown mounted to pipe using PDA6260 pipe mounting kit. See *Pipe Mounting Instructions* on page *20* for details.

Model	Description
PDA6260	2" Pipe Mounting Kit for PD4

Signal Splitter & Conditioner Accessories

Model	Description
PD659-1MA-1MA	Signal Isolator with One 4-20 mA Input and One 4-20 mA Output
PD659-1MA-2MA	Signal Splitter with One 4-20 mA Input and Two 4-20 mA Outputs
PD659-1V-1MA	Signal Conditioner with One 0-10 VDC Input and One 4-20 mA Output
PD659-1MA-1V	Signal Conditioner with One 4-20 mA Input and One 0-10 VDC Output

Note: These signal splitters and conditioners do not carry hazardous area approvals and are thus not suitable for location in hazardous areas. The use of additional protective devices may allow them to be installed in a safe area and connected to a device in a hazardous area. User should consult a professional engineer to determine suitability of these products for their specific application.

PDA1024-01 24 VDC Power Supply

The PDA1024-01 is a DIN rail mounted 1.5 A, 24 VDC power supply that can be used to power the 4-20 mA transmitter.

Useful Tools

PD9501 Multi-Function Calibrator

This PD9501 Multi-Function Calibrator has a variety of signal measurement and output functions, including voltage, current, thermocouple, and RTD.

PD9502 Low-Cost Signal Generator

The PD9502 is a low-cost, compact, simple to use 4-20 mA or 0-10 VDC signal generator. It can easily be set for 0-20 mA, 4-20 mA, 0-10 V or 2-10 V ranges. Signal adjustment is made with a one-turn knob. A wall plug is provided with the instrument. Optional USB power bank is available.

Specifications

Except where noted all specifications apply to operation at +25°C.

Display

Display	Dual-line LCD with backlight. Top: 2.8" (71 mm), 5 alphanumeric 14-segment characters. Bottom: 1.5" (39 mm), 8 alphanumeric 14-segment characters. Display may be programmed to turn red and flash a user-defined message on alarm condition.
Top Display	5 digits (-9999 to 99999) or 5 characters (all capital & most lower-case letters)
Bottom Display	8 digits (-9,999,999 to 99,999,999; separated by commas) or 8 characters (all capital & most lower-case letters)
Backlight Power Requirement	24 VDC @ 46 mA, typical
Bargraph	20 segments, numeric percent indication at top
Decimal Point	Up to four decimal places on top display and up to seven decimal places on bottom display
Commas	Commas to indicate 1000s (e.g. 88,987,628) on bottom display only
Dual-Scale Feature	The input can be displayed in different scales on the top and bottom displays. For instance, the top display could display the input in height and the bottom display could display that same input in volume.
Alarm Indication	Programmable: red backlight, flashing display, Bargraph segment flashes on alarm. Backlight requires external 24 VDC.
Custom Alarm Messages	Programmable for each relay/open collector: 8 characters maximum; displayed every 10 sec for 1 sec on bottom display. May be turned off.
Display Update Rate	Ambient > -10°C: 1 Update/Second Ambient = -20°C: 1 Update/2 Seconds From -20°C to -40°C the update rate slows down 1 second for every -2°C (e.g. at -24°C, 1 update/4 seconds).
Overrange	Top: 99999; Bottom: 99,999,999 (flashing)
Underrange	Top: -9999; Bottom: -9,999,999 (flashing)

General

Programming Method	Buttons behind lower panel door & Free PC-based USB programming software
Enclosure & Materials	Material: High impact Polycarbonate with UV stabilizer enclosure, UL 94V-0 Rating: NEMA 4X / IP65 Gasket: Polyurethane Color: gray. Includes four PG11 through-hole conduit openings, with two factory installed PG11, IP68, black nylon threaded hole plugs with backing nuts.
Environmental	Operating temperature range: -40 to 75°C (-40 to 167°F) Storage temperature range: -40 to 85°C (-40 to 185°F) Relative humidity: 0 to 90% non-condensing; Printed circuit boards are conformally coated.
Noise Filter	Averages the input signal over a period of time between 1 and 16 seconds to dampen the effects of a noisy signal that causes a jumpy display.
Filter Bypass	0.0 to 99.9% of full scale. Input signal changes that are greater than bypass value are displayed immediately.
Recalibration	Recalibration is recommended at least every 12 months.
Max/Min Display	Max/min readings reached by the process are stored until reset by the user or until power to the meter is turned off.
Tare	Tare function zeros out the meter to accommodate for weight of a container. Tare function can be assigned to a function key or a digital input.
Password	Programmable password restricts modification of programmed settings.
Non-Volatile Memory	All programmed settings are stored in non-volatile memory for a minimum of ten years if power is lost.
Normal Mode Rejection	64 dB at 50/60 Hz
Connections	Removable screw terminals accept 12 to 22 AWG wire Remote contacts: Accept 16 to 30 AWG wire.
Tightening Torque	Screw terminal connectors: 4.5 lb-in (0.5 Nm) Mounting screws: 8.0 lb-in max. (0.9 Nm) Remote contacts: 2.5 lb-in (0.28 Nm)
Overall Dimensions	10.6" x 12.6" x 4.8" (270 mm x 320 mm x 121 mm) (H x W x D)
Weight	5.5 lbs (2.5 kg)
Warranty	3 years parts and labor. See Warranty Information and Terms & Conditions on www.predig.com for complete details.

Input

Input	4-20 mA
Accuracy	±0.02% of span ±1 count, Square root and programmable exponent: 10-100% FS
Voltage Drop	2.1 V maximum
Equivalent Resistance	105 Ω @ 20 mA
Input Overload	Over current protection to 1 A maximum, Over voltage protection to 30 VDC max (between mA+ and mA-)
Temperature Drift	25 PPM/°C from -40 to 75°C ambient
Function	PV1: Linear (2-32 points), square root, or programmable exponent PV2: Linear (2-32 points) or round horizontal tank
Low-Flow Cutoff	0.1 to 999,999 or disable. Point below at which the display always shows zero.
HART Transparency	The meter does not interfere with existing HART communications; it displays the 4-20 mA primary variable and it allows the HART communications to pass through without interruption. The meter is not affected if a HART communicator is connected to the loop. The meter does not display secondary HART variables.

Common Open Collector & Relay Specifications

Number	Two open collectors & two relays
High or Low Alarm	User programmable for high or low alarm
Alarm Deadband	0-100% FS, user programmable
Output Assignment	Alarm, Timer, Stopwatch, or Disable
Alarm Output Source	Assign to PV (PV1, PV2) or Digital Input
On & Off Time Delay	0 to 9,999 seconds
Fail-Safe Operation	Independent for each open collector and relay. Fail-safe on, the output is on under normal conditions. Fail-safe off, the output is on under alarm conditions.
Alarm Operation	Automatic, automatic with manual override, latching (manual reset anytime), latching with reset after cleared (manual reset only after alarm has cleared)
Alarm Indication	Programmable: red backlight, flashing display, Bargraph segment flashes on alarm. Backlight requires external 24 VDC.
Custom Alarm Messages	Programmable for each relay/open collector: 8 characters maximum; displayed every 10 sec for 1 sec on bottom display. May be turned off.
Alarm Acknowledge	Front panel ACK button or external digital input resets output and screen indication.
Auto Initialization	When power is applied to the meter, open collectors and relays will reflect the state of the input to the meter.
Timer Output	One-shot or Continuous Off Time Delay: 1 sec to 99:59:59 (hrs:min:sec) On Time: 1 sec to 99:59:59 (hrs:min:sec)
Stopwatch	Output turns on when started and off when stopped.

Open Collector Outputs

Rating	Isolated open collector, sinking NPN 5-30 VDC @ 150 mA maximum
Output Assignment	Pulse, Alarm, Timer, Stopwatch, or Disable
Pulse Output Source	PV (PV1, PV2) or Test Frequency
Pulse Output Factor	0.000001 to 999,999.9
Pulse Width	0.5 ms @ 1 kHz; 500 ms @ 1 Hz; 50% duty cycle
Pulse Output Frequency	1,000 Hz maximum
Quadrature Pulse Output	Available for Output 2 (90° behind Output 1) 500 Hz max
Alarm Output Source	Assign to PV (PV1, PV2) or Digital Input

Solid-State Relays

Rating	250 VAC/VDC @ 1 A resistive 75 VA; 250 VAC; 0.6 A pilot duty (inductive) 25 VA; 250 VDC; 0.6 A pilot duty (inductive)
Noise Suppression	Metal oxide varistors across outputs
Relay Assignment	Pump Alternation, Alarm, Timer, Stopwatch on/off, or Disable
Alarm Output Source	Assign to PV (PV1, PV2) or Digital Input
Pump Alternation	Relays may be programmed to alternate with each pump cycle with an elapsed time override where the pumps will alternate regardless of level. Pump alternation time can be programmed for 0 to 999:59 (hrs:min)
Relay (Pump) Runtime	Meter will keep track of how long each relay (pump) has operated and display this information.
Relay (Pump) Cycles	Meter will keep track of how many times the relays (pumps) have cycled and display this information.

4-20 mA Transmitter Output

Accuracy	±0.05% FS ±0.001mA
Output Source	PV1, PV2, re-transmit; reverse scaling allowed
Scaling Range	1.00 to 23.0 mA
Disable	High impedance state, less than 1 mA
Calibration	Factory calibrated 4.00 to 20.00 mA
Underrange	1.0 mA, 3.5 mA, or 3.8 mA (If input < 3.5 mA); or disable underrange; user selectable
Overrange	20.5 mA, 20.8 mA, or 23.0 mA (If input > 20.5 mA); or disable overrange; user selectable
Isolation	500 V input-to-output
Temperature Drift	0.5 µA/°C max from -40 to 75°C ambient
External Loop Power Supply	7.0 VDC to 30.0 VDC maximum
Output Loop Resistance	10-750 Ω @ 24 VDC; 10-1100 Ω @ 30 VDC

On-Board Digital Input

Function	Remote operation of front-panel buttons, acknowledge/reset relays, reset max/min values, etc. See User section of *Display* Functions & Messages on page *29* for a complete list of capabilities.
Contacts	2.1 VDC on contact. Connect normally open contacts across DI+ and DI-
Logic Levels	Logic High: 2.4 to 30 VDC (max) Logic Low: 0 to 0.9 VDC

Remote Contacts

Function	Terminals provided for remote operation of all four programming / operation buttons (use PDA2364-MRUE control station).
Remote Buttons	Menu, Right, Up, Enter
Remote Function Keys	F1 / Reset* F2 / Max* F3 / Ack* *Defaults

⚠ **WARNING**

- **DO NOT** connect anything else, other than normally open switch contacts, to the Remote Contacts terminals.

MeterView XL Programming Software

Availability	Free download from www.predig.com
System Requirements	Microsoft® Windows® 7 & 10
Communications	USB 2.0 (Standard USB A to USB B) Cable provided
Configuration	Configure all parameters on the meter. Configure meters one at a time.
Configuration Files	Generate with or without meter connected; Save to file for later use.
USB Power Connection	Meter is powered by USB connection during programming, if 4-20 mA loop is not connected.

⚠ WARNING

- The meter should only be connected to a computer while it is located in a safe area.

To download the latest MeterView XL programming software and manual, visit predig.com/meterviewxl.

⚠ IMPORTANT

- The image in the software shows the panel meter version. The same software is used for the PD4.

General Compliance Information

PD4-6608 Only
ATEX/IECEx Special Conditions for Safe Use

The following conditions relate to safe installation and/or use of the equipment.

- The equipment loop/power port must be connected to an intrinsically safe barrier with U_o ≥ 5.8V.
- The PD4 enclosure is non-metallic. Under certain extreme circumstances, the plastic enclosure may store an ignition-capable level of electrostatic charge. Therefore, the user/installer shall implement precautions to prevent the build-up of electrostatic charge, e.g. locate the equipment where a charge-generating mechanism (such as wind-blown dust) is unlikely to be present and clean with a damp cloth.
- All cable entries into the equipment shall be via cable glands or conduit which provide a minimum degree of protection of IP54.
- The equipment shall not be opened when a hazardous atmosphere is present.
- The remote contact port shall only be connected to voltage free contacts.

For European Community:

The PD4-6608 must be installed in accordance with the ATEX directive 2014/34/EU, the product certificates CML 18ATEX2091X, IECEx CML 18.0051X and the product manual.

There is no need to remove the meter from its case to complete the installation, wiring, and setup of the meter for most applications.

I.S. Equipment Entity Parameters	Required Relationship Between Entity Parameters	I.S. Barrier Entity Parameters
V max (or Ui)	≥	Voc or Vt (or Uo)
I max (or Ii)	≥	Isc or It (or Io)
P max, Pi	≥	Po
Ci + Ccable	≤	Ca (or Co)
Li + Lcable	≤	La (or Lo)

For North American Community:

Installation and service of this device and/or associated apparatus (barrier) should be performed only by trained service personnel and must be installed in accordance with the manufacturer's control drawing, Article 504 of the National Electric Code (ANSI/NFPA 70) for installation in the United States, or Section 18 of the Canadian Electrical Code for installations in Canada.

⚠ **WARNING**

- **EXPLOSION HAZARD** – Do not disconnect equipment unless power has been removed or the area is known to be non-hazardous.
- **RISQUE D'EXPLOSION** – NE PAS BRANCHER NI DÉBRANCHER SOUS TENSION.

Year of Construction

This information is contained within the serial number with the first four digits representing the year and month in the YYMM format.

17

EU Declaration of Conformity

For shipments to the EU and UK, a Declaration of Conformity was printed and included with the product. For reference, a Declaration of Conformity is also available on our website www.predig.com/docs.

Safety Information

⚠ CAUTION

- Read complete instructions prior to installation and operation of the meter.

⚠ WARNINGS

- Installation and service should be performed only by trained service personnel.
- Service requiring replacement of internal components must be performed at the factory.
- Control room equipment must not use or generate more than 250 VRMS or VDC.
- Hazardous location installation instructions for associated apparatus (barrier) must be followed when installing this equipment.
- For safe installation of an ATEX approved transmitter in series with PD4-6608 loop-powered meters, the hazardous location installation instructions for the transmitter, PD4-6608 loop-powered meter, and associated apparatus (barrier) must be compatible.
- PD4-6608 Series Loop-Powered meters do not add capacitance or inductance to the loop under normal or fault conditions.
- Substitution of components may impair hazardous location safety.
- Equipment contains non-metallic materials and therefore special care and consideration should be made to the performance of these materials with respect to chemicals which may be present in a hazardous environment.

Field Modification

Service requiring replacement of internal components must be performed at the factory.

Entire meter assembly (electronic assembly) may be replaced within the field with a unit supplied from the factory labeled "Field Modification".

Installation

There is no need to open the clear plastic front cover in order to complete the installation, wiring, and setup of the meter.

All programming is done using MeterView XL software or through the buttons and switches located behind the lower panel door and are accessible by removing the single securing screw. Wires should be run through the knockout holes located on the bottom of the meter, see *Figure 5. Conduit Holes Location – Bottom View* on page *19* for details.

There are a total of four pre-drilled conduit entry holes located at the bottom of the meter. If the need to drill additional holes arises, make sure you will have the clearance necessary for conduit mounting hardware.

The PD4 comes with two factory installed PG11, IP68, black nylon threaded hole plugs with backing nuts for unused conduit holes.

⚠ WARNING

- PD4-6608 installation must be performed in accordance with Control Drawing DW2638 (contained within LIM4-6600-2) in order to meet agency approval ratings.

Unpacking

Remove the meter from box. Inspect the packaging and contents for damage. Report damages, if any, to the carrier.

If any part is missing or the meter malfunctions, please contact your supplier or the factory for assistance.

Wall Mounting Instructions

The meter can be mounted to any wall using the four provided mounting holes. Note that the bottom mounting holes are located underneath the lower door panel. To mount the meter to a wall, follow these instructions

- Prepare a section of wall approximately 11" x 13" (280 mm x 330 mm) for meter mounting by marking with a pencil the mounting holes (shown in *Figure 1*) on the wall.
- Select the appropriate mounting screws for the mounting surface to be used. The mounting holes diameter is shown on *Figure 2*.
  Note: *Mounting screws are not included.*
- Using a drill bit slightly smaller than the girth of the mounting screws, pre-drill holes at the mounting locations previously marked.
- Insert mounting screws into the four mounting holes and screw them into the pre-drilled holes. **DO NOT** overtighten the mounting screws as it is possible that the enclosure could crack and become damaged.

Figure 4. Meter Dimensions - Front View
Conduit Holes Location

Figure 5. Conduit Holes Location – Bottom View

19

Pipe Mounting Instructions

The meter can also be mounted to a pipe using the optional pipe mounting kit (PDA6260). This kit includes two mounting plates, two U-bolts, and the necessary nuts and bolts. To mount the meter to a pipe using the pipe mounting kit accessory, follow these instructions.

- Secure the mounting plates to the top and bottom (for vertical pipes) or left and right (for horizontal pipes) of the reverse side of the meter enclosure using the provided fasteners.
  DO NOT overtighten the fasteners as it could cause damage to the enclosure.
- Using the provided nuts and U-bolts, secure the mounting plates to the pipe applying enough torque such that the meter cannot be moved up or down (or side to side).

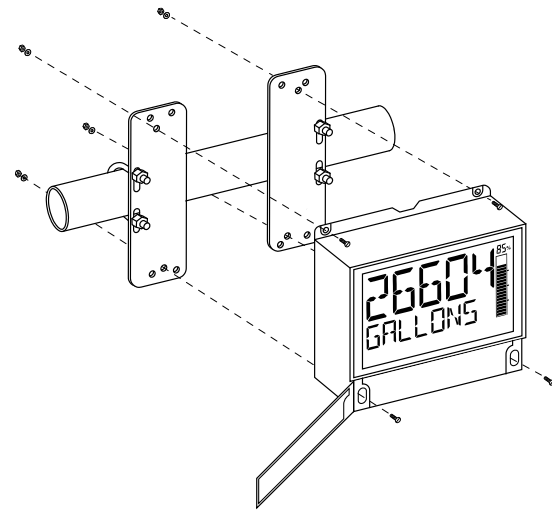

Figure 7. Horizontal Pipe Mount Assembly

20

MeterView XL Programming Software

Free, PC-based, MeterView XL software that connects to the meter via a USB cable is available for programming and setup of the meters. This software greatly simplifies the programming process and allows the user to save configuration files for later use. The meter will also be powered by the USB connection so no additional power is needed during programming.

- Free PC-Based USB Programming Software
- Easy Programming of Feature-Packed Product
- USB Connection Provides Power to the Meter During Programming
- Save & Print Configuration Files without Meter Connected
- USB Cable Provided with Meter
- PC Data Logging for One or Multiple Variables

MeterView XL Software Installation

⚠️ **WARNING**

- The meter should only be connected to a computer while it is located in a safe area.

⚠️ **IMPORTANT**

- Please uninstall previous versions of this software prior to downloading, installing, and running the latest version.
- The image in the software shows the panel meter version. The same software is used for the PD4.

1. For complete instructions on how to use MeterView XL go to predig.com/meterviewxl.

2. Download MeterView XL Installation file to your PC from the included CD or go to predig.com/meterviewxl

3. Locate the MeterView XL zipped folder on your PC and double-click to extract and open:
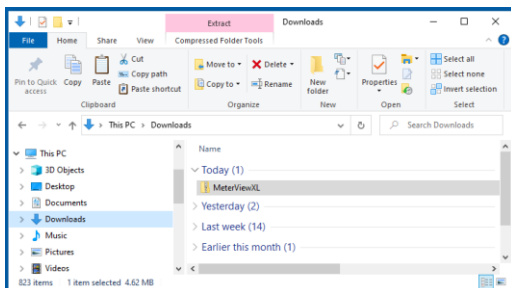

4. Double-click MeterView XL Windows Installer Package file to open:
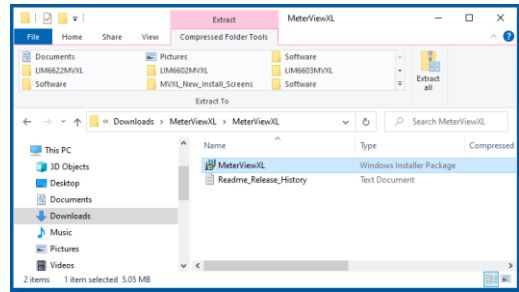

5. The MeterView XL Setup Wizard window will appear. Click "Next" to start the installation process:
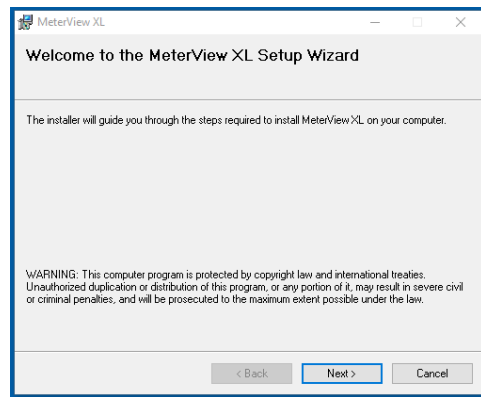

6. The MeterView XL License Agreement window appears next. Select "I agree" and click "Next" to continue the installation process:
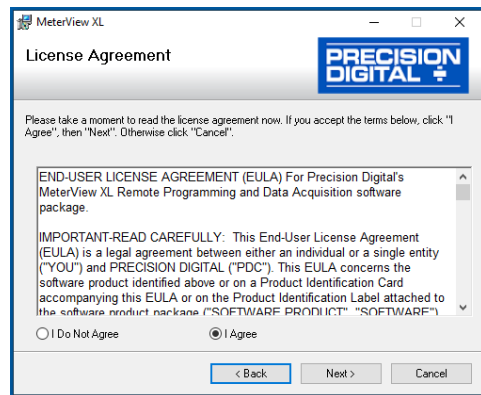

7. Choose the folder location where you would like the software to be installed to and select options for use. Then click "Next" to continue:
8. Confirmation window will appear. Click "Next" to confirm the installation:
9. The User Account Control message is displayed. Click "Yes" to proceed with the installation:
10. Finally, the Installation Complete window will appear. Click "Close" to exit:
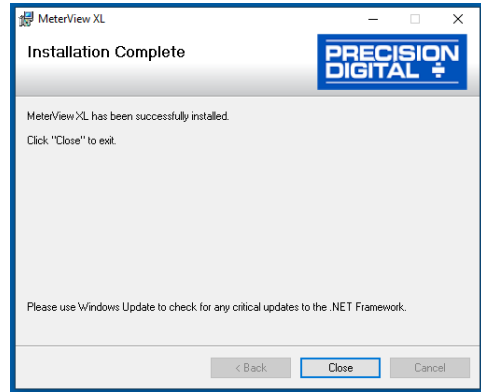

Now you are ready to open the MeterView XL software to begin programming your Loop Leader+ meter.

Connecting to the Computer

Loop Leader+ series meters may be connected to any Windows 7 or Windows 10 PC via the provided USB cable by following these steps:

1. Open the MeterView XL software.
2. Connect the Loop Leader+ meter to the PC with the provided USB cable.
3. The software will ask if you would like to read the meter. Click OK.

Specifications

Availability	Free download from www.predig.com
System Requirements	Microsoft® Windows® 7 & 10
Communications	USB 2.0 (Standard USB A to USB B)
Configuration	Configure all parameters on the meter. Configure meters one at a time.
Configuration Files	Generate with or without meter connected; Save to file for later use.
USB Power Connection	Meter is powered by USB connection during programming, if 4-20 mA loop is not connected.

Connections

All connections are made to screw terminal connectors located behind the lower panel door. Remove the single securing screw in order to access the wiring terminals.
This section is only intended for PD4-6604 safe area installations.

> ⚠ **CAUTION**

- Use copper wire with 60°C or 60/75°C insulation for all line voltage connections. Observe all safety regulations. Electrical wiring should be performed in accordance with all applicable national, state, and local codes to prevent damage to the meter and ensure personnel safety.

> ⚠ **WARNING**

- PD4-6608 installation must be performed in accordance with Control Drawing LIM4-6600-2 in order to meet agency approval ratings.

Connectors Labeling

The graphics below show the location of all connectors available with requested configuration.
Figure 8. Connector Labeling for PD4-66XX-LNN

Figure 9. Connector Labeling for PD4-66XX-L5N

23

Wiring Diagrams

> ⚠️ **WARNING**
>
> - PD4-6608 installation must be performed in accordance with Control Drawing LIM4-6600-2 in order to meet agency approval ratings.
> - For ATEX certification, barrier and transmitter must be ATEX Certified with Entity Parameters and must be connected per manufacturer's instructions.

Safe Area Current Loop (4-20 mA) Connections

Signal connections are made to a four-terminal connector labeled INPUTS. See *Connectors Labeling* on page *23.* The following figures show a 4-20 mA current loop connected to the meter. *Figure 10* shows the connection without the backlight and *Figure 11* shows the connection with the backlight (the backlight can be disabled/enabled in the SYSTEM menu). The backlight can be powered from the same DC power source that powers the 4-20 mA loop, but requires additional wiring as shown in *Figure 11*.

There are no switches or jumpers to set up for the input. Setup and programming is performed through the programming buttons or MeterView XL software.
Figure 10. 4-20 mA Input Connection without Backlight
Figure 11. 4-20 mA Input Connection with Backlight

The current input is protected against current overload up to 1 amp. The display may or may not show a fault condition depending on the nature of the overload.

Safe Area Digital Input Connections

A digital input is standard on the meter. This digital input is connected with a normally open contact across DI+ and DI-, or with an active low signal applied to DI+ and DI-.
Figure 12. Digital Input Connections

Safe Area 4-20 mA Output Connections

Connections for the 4-20 mA transmitter output are made to the connector terminals labeled mA OUT. The 4-20 mA output must be powered from an external power supply.
Figure 13. 4-20 mA Output Connections

Safe Area Solid-State Relay Connections

Relay connections are made to a four-terminal connector labeled SSR OUTPUTS on *Figure 14. Solid-State Relay Connections*. Each relay's C terminal is common only to the normally open (NO) contact of the corresponding relay.
Figure 14. Solid-State Relay Connections

Safe Area Open Collector Output Connections

Open collector output 1 and 2 connections are made to terminals labeled O1+ and O1-, and O2+ and O2-. Connect the alarm or pulse input device as shown below.
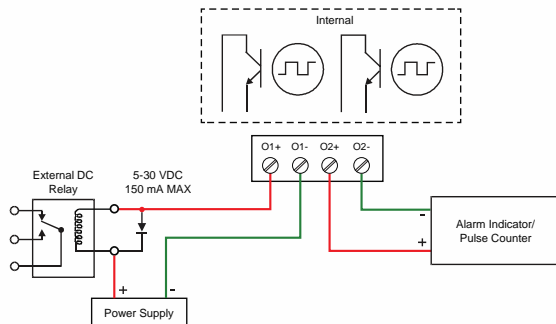

Figure 15. Open Collector Output Connections

Remote Operation of Meter

The meter can be operated remotely by connecting a PDA2364-MRUE control station to the Remote Contacts located behind the lower panel door of the meter as illustrated in *Figure 16. PDA2364-MRUE Control Station Connected to Remote Contacts on PD4*.

Note: The control station does not carry hazardous area approvals and thus is not suitable for location in hazardous areas.
The use of additional protective devices may allow it to be installed in a safe area and connected to a device in a hazardous area. User should consult a professional engineer to determine suitability of this product for their specific application.
Figure 16. PDA2364-MRUE Control Station Connected to Remote Contacts on PD4

Wiring Connections for MOD-PD2LH Models

The following diagram is for MOD-PD2LH models with a single color light.

The Light / Horn cannot be powered by the 4-20 mA loop. To use the Light / Horn an external power supply must be used such as the PDA1024-01 as the following diagram illustrates.

Light / Horn & Button accessory available only on PD4-6604 units.
Figure 17. Light / Horn and Button (MOD-PD2LH) Connected to PD4

Available Light / Horn Colors

Setup and Programming

The meter is factory calibrated prior to shipment to display 0.00 to 100.00, which corresponds to the 4-20 mA input. The calibration equipment is traceable to NIST standards.

Overview

There are no jumpers to set; setup and programming is done by using the buttons (MENU, NEXT, UP, ENTER) located behind the lower panel door of the meter or PC-based software.

The meter may be powered via the USB connection located behind the lower panel door of the meter for the purposes of programming only. The backlight requires an external power source. If the meter is powered from the USB, the backlight will only work if it is powered separately from a DC supply.

MeterView XL Programming Software

The fastest and easiest way to program the meter is using the free Meterview XL programming software. This software greatly simplifies the programming process and allows the user to save configuration files for later use.

The meter connects to the PC via a provided USB cable and is powered by the USB connection, so no additional power is needed during programming.

To download the latest MeterView XL programming software and manual, visit predig.com/meterviewxl.

⚠ WARNING

- The meter should only be connected to a computer while it is located in a safe area.

⚠ IMPORTANT

- The image in the software shows the panel meter version. The same software is used for the PD4.

⚠ CAUTION

- Care should be exercised to avoid ground loops when connecting the USB to an active loop (e.g. power supply, transmitter, loop-powered meter, etc.). It is recommended to connect the (mA+) terminal of the meter to the (-) terminal of a two-wire transmitter and the (mA-) to the (+) of the next device in the loop or to the (-) terminal of the power supply.

Programming Buttons
Button	Description	Button	Description	Bargraph with Percentage Indication
MENU **MENU**	**Menu**	UP **F2**	**Up Arrow/F2**	73%
NEXT **F1**	**Right Arrow/F1**	ENTER **F3**	**Acknowledge (Enter)/F3**	

- Press the *Menu* button to enter or exit the Programming Mode at any time.

- Press or hold the *Right-Arrow* button to scroll forward through the menus, select digits during numeric programming, select characters during text programming, or decrement the value of a digit or character selected with the *Up-Arrow* button.

- Press and hold the *Right-Arrow* button to zero or clear digits/characters while in data-entry mode.

- Press or hold the *Up-Arrow* button to scroll backwards through the menus or to increment the value of a digit or character.

- Press the *Enter* button to access a menu or to accept a setting or programmed digit/character value.

Remote Buttons

The meter can be operated via a remote control station (PDA2364-MRUE) using the Remote Contacts. The PDA2364-MRUE mimics the PD4 meter's four programming buttons: Menu, Right Arrow, Up Arrow, and Enter.

See *Remote Operation of Meter* on page *25* for details.

Display Functions & Messages

The meter displays various functions and messages during setup, programming, and operation. The following table shows the main menu functions and messages in the order they appear in the menu.

Display Functions & Messages	
Parameter	**Action/Setting Description**
INPUT (PV1 and PV2)	Program the meter 4-20 mA input (two menus, PV1 and PV2, are available if in dual-scale mode; see PV2 under advanced features menu)
SCALE PV (1 or 2)	Scale the selected PV
UNITS	Select the display units
VOLUME	Volume unit class
GAL	Gallons
L	Liters
IGAL	Imperial Gallons
M3	Cubic Meters
BBL	Barrels
BUSH	Bushels
cuYD	Cubic Yards
cuFt	Cubic Feet
cuIn	Cubic Inches
L.BBL	Liquid barrels
BBBL	Beer barrels
HECtL	Hectoliter
AF	Acre-Foot
CUSTM	Custom Unit
HEIGHT	Height unit class
INCH	Inches
FEET	Feet
YARD	Yards
CM	Centimeters
M	Meters
CUSTOM	Custom unit
TEMP	Temperature unit class
°F	Degrees Fahrenheit
°C	Degrees Celsius
K	Kelvin
°RA	Degrees Rankine
PRESSURE	Pressure unit class
PSI	Pounds per square inch
InHg	Inches of mercury
InH2O	Inches of water
mmHg	Millimeters of mercury
Kg/CM2	Kilograms per square centimeter

Display Functions & Messages	
Parameter	**Action/Setting Description**
Kg/M2	Kilograms per square meter
mBAr	Millibar
BAr	Bar
PA	Pascal
hPA	Hectopascal
KPA	Kilopascal
MPA	Megapascal
CUSTM	Custom unit
WEIGHT	Weight unit class
gm	Grams
Kg	Kilograms
tonnE	Tonnes (metric)
oZ	Ounces
lb	Pounds
ton	Tons
CUSTOM	Custom unit
RATE	Rate unit class
/SECOND	Units per second
/MINUTE	Units per minute
/HOUR	Units per hour
/DAY	Units per day
GAL/(T)	Gallons per time unit (T)
L/(T)	Liters per time unit (T)
IGAL/(T)	Imperial gallons per time unit (T)
M3/(T)	Cubic meters per time unit (T)
BBL/(T)	Barrels per time unit (T)
BUSH/(T)	Bushels per time unit (T)
cuYD/(T)	Cubic Yards per time unit (T)
cuFt/(T)	Cubic Feet per time unit (T)
cuIn/(T)	Cubic Inches per time unit (T)
L.BBL/(T)	Liquid barrels per time unit (T)
BBBL/(T)	Beer barrels per time unit (T)
HECtL/(T)	Hectoliter per time unit (T)
AF/(T)	Acre-Foot per time unit (T)
CUSTOM/	Custom unit per time unit (T)
CUSTOM	Custom unit class
CUNIT	Custom unit
INPUT 1	Program input 1 value
INP 1	Enter the input 1 value
DISP 1	Program display 1 value
DSP 1	Enter the display 1 value
INPUT 2	Program input 2 value (up to 32 points)
INP 2	Enter the input 2 value

29

Display Functions & Messages

Parameter	Action/Setting Description
DISP 2	Program display 2 value (up to 32 points)
DSP 2	Enter the display 2 value
SAVE?	Save programmed units, input, and display values
OUTPUT	Program the meter's available outputs
OPEN COLLECTR	Program the meter's open collector outputs
OUTPUT 1	Open collector 1 setup
OUTPUT2	Open collector 2 setup
DISABLE	Disable the open collector
PULSE	Program the open collector for pulse output
ALARM	Program the open collector for alarm output
TIMER	Program the open collector as a timer
STPWATCH	Program the open collector to turn on while the stopwatch is running
RELAY	Program the meter's relay outputs
OUTPUT 1	Relay 1 setup
OUTPUT2	Relay 2 setup
DISABLE	Disable the relay
ALARM	Program relay for alarm functionality
PUMPCTRL	Program relay for pump control application
TIMER	Program relay as a timer
STPWATCH	Program relay to turn on while the stopwatch is running
RELAY INFO	View relay runtime and cycle count
4-20 MA	Program the meter's 4-20 mA output
PV	Program a range to transmit based on the display value
RETRANS	Retransmit the mA input signal
DISABLE	Disable the 4-20 mA output
CONTROL	Program manual or automatic operation for the outputs
OC 1	Open collector 1
OC2	Open collector 2
RELAY 1	Relay 1
RELAY2	Relay 2
4-20 mA	4-20 mA output
AUTO	Set selected output to automatic operation
MANUAL	Manually control selected output operation

Display Functions & Messages

Parameter	Action/Setting Description
ADVANCED	Program the meter's advanced features
PV SETUP (PV 1 & PV 2)	Advanced input programming (two menus, PV 1 and PV 2, are available if in dual-scale mode; see PV 2 under advanced features menu)
SOURCE	Select PV 2 source (dual-scale only; see PV 2 under advanced features menu)
4-20 mA	Source PV 2 from the mA input
PV 1	Source PV 2 from PV 1
FUNCTION	Select linear, square root, or programmable exponent function
LINEAR	Set meter for linear function and select number of linearization points
SQROOT	Set meter for square root extraction
EXPONENT	Set meter for programmable exponent and enter exponent value
RH TANK	Round horizontal tank (dual-scale only; see PV2 under advanced features menu)
SCALECAL	Scale or calibrate the mA input
SCALE PV	Scale the input
CAL PV	Calibrate the input
CUTOFF	Set low-flow cutoff
DISABLE	Disable low-flow cutoff
ENABLE	Enable low-flow cutoff
FILTER	Set noise filter value
10 SEC	1 second
20 SEC	2 seconds
40 SEC	4 seconds
80 SEC	8 seconds
160 SEC	16 seconds
OFF	Turn filter off
BYPASS	Set filter bypass (0.0 to 99.9% FS)
PASSWRD	Set a password for the meter
PASS MAIN	Program the main meter password
USER	Assign function keys / digital input
F 1	Assign F1 function key
F2	Assign F2 function key
F3	Assign F3 function key
DI	Assign digital input
DISP FN	Set the function key or digital input to display a value
DISPLAY	Cycle max, min, and PV(s)

Display Functions & Messages

Parameter	Action/Setting Description
DISP PV	Display the PV
PCT PV	Display the PV's percentage of max (20 mA)
D UNITS	Display the PV's units
D TAG	Display the PV's tag
DISPMIN	Display the PV's minimum value
DISPMAX	Display the PV's maximum value
MIN MAX	Display the PV's minimum and maximum value
D mA IN	Display the current mA input value
D mAOUT	Display the current mA output value
MENU FN	Set the function key or digital input to access a menu
RLYINFO	Go to relay information menu (INFO)
MANCTRL	Go to output control menu (CONTROL)
TIMR OC1	Open collector 1 timer
TIMR OC2	Open collector 2 timer
TIMER R1	Relay 1 timer
TIMER R2	Relay 2 timer
TIMERFN	Set the function key or digital input to start or stop a timer
STRTALL	Start all timers
STOPALL	Stop all timers
SSTPALL	Start or stop all timers
OC1	Start/stop open collector 1 timer
OC2	Start/stop open collector 2 timer
RLY1	Start/stop relay 1 timer
RLY2	Start/stop relay 2 timer
START	Start the selected timer output
STOP	Stop the selected timer output
STR--STP	Start or stop the selected timer output
ALARMFN	Set the function key or digital input to acknowledge an alarm or access set points
ACK	Acknowledge all active alarms
SETPOINT	Access all output set points
SETPTOC1	Access open collector 1 set point
SETPTOC2	Access open collector 2 set point
SETPTR1	Access relay 1 set point
SETPTR2	Access relay 2 set point
SWATCHFN	Set the function key or digital input to activate stopwatch
START	Start the stopwatch
STOP	Pause/Stop the stopwatch

Display Functions & Messages

| Parameter	Action/Setting Description
STR--STP	Start or stop the stopwatch
TAREFN	Set the function key or digital input to tare the display
TARE	Tare the display value
RST TARE	Reset the display value
HOLD FN	Set the function key or digital input to hold an output
HOLDOUT	Hold all outputs
HLDUNHLD	Hold or un-hold all outputs
OC 1+2	Hold/un-hold open collector outputs
RLY 1+2	Hold/un-hold relay outputs
mAOUT	Hold/un-hold 4-20 mA output
HOLD	Hold selected output
HLDUNHLD	Hold or un-hold selected output
DISABLE	Disable function key or digital input
RST FN	Set the function key or digital input to reset a value
RESET	Reset min, max, or max/min PV
R MINMAX	Reset max and min PV value
HINT	Display hint text on key press and execute action on next key press
OFF	Turn the hint function off
ON	Turn the hint function on
SYSTEM	Program system settings
AOUTCAL	Calibrate the analog output
DEFAULT	Reset meter to factory defaults
PV 2	Enable the meter to scale a second PV based on the same 4-20 mA input
DISABLE	Disable dual-scale feature (default)
ENABLE	Enable dual-scale feature
BACKLITE	Enable/disable display backlight
ENABLE	Enable the backlight (default)
DISABLE	Disable the backlight
INFO	View meter software version and model; change the identifier tag
SFT	The software ID number
VER	The software version
MODEL	The meter model number
IDTAG	The meter identifier tag Press *Enter* to edit tag
ICAL	Internal calibration used for scaling
DISPLAY	Program the meter's display
UNITS	Change the display units within the selected unit class
DECPT	Change the decimal point location

Display Functions & Messages

Parameter	Action/Setting Description
COMMA	Enable or disable the use of a comma on the bottom display
ENABLE	Enable comma (default)
DISABLE	Disable comma
BARGRAPH	Turn off or change the bargraph
PV	Set the bargraph to display the percentage of a user-selected range
PV PCT	Set the bargraph to display the PV percentage of full scale
OFF	Turn off the bargraph
TOP	Select what to display on the top display
PV (1 or 2)	Display the process variable
PV+UNIT (1 or 2)	Display the process variable and units alternating
PV+TAG (1 or 2)	Display the process variable and tag alternating
TAG+UNIT	Display tag and units alternating
PV+U+TAG (1 or 2)	Display the process variable, unit, and tag alternating
PV1+PV2	Display both process variables (dual-scale only; see PV 2 under advanced features menu)
TAG	Display the tag
STPWATCH	Display the stopwatch
TIMR OC1	Display open collector 1 timer
TIMR OC2	Display open collector 2 timer
TIMER R1	Display relay 1 timer
TIMER R2	Display relay 2 timer
MIN	Display minimum value
MAX	Display maximum value
MIN MAX	Display alternating min and max
OFF	Turn top display off
UNITS	Display the units
BOTTOM	Select what to display on the bottom display
UNITS	Display the units
PV (1 or 2)	Display the process variable
PV+UNIT (1 or 2)	Display the process variable and unit alternating
PV+TAG (1 or 2)	Display the process variable and tag alternating
TAG+UNIT	Display the tag and unit alternating
PV+U+TAG (1 or 2)	Display the process variable, unit, and tag alternating
PV1+PV2	Display both process variables (dual-scale only; see PV 2 under advanced features menu)

Display Functions & Messages

Parameter	Action/Setting Description
TAG	Display the tag
STPWATCH	Display the stopwatch
TIMR OC1	Display open collector 1 timer
TIMR OC2	Display open collector 2 timer
TIMER R1	Display relay 1 timer
TIMER R2	Display relay 2 timer
OFF	Turn bottom display off
PV PCT (1 or 2)	Display the process variable percentage of full scale
mA IN	Display the current mA input value
mA OUT	Display the current mA output value

Main Menu

The main menu consists of all the meter's programmable functions: *Input*, *Output, Advanced,* and *Display*.

- Press **Menu** button to enter *Programming Mode* then press the **Right-Arrow** button to move forward through the menu and the **Up-Arrow** button to move back.

- Press **Menu** at any time to go back one level or press & hold to exit and return to *Run Mode*. Changes made to settings prior to pressing **Enter** are not saved.

- Changes to the settings are saved to memory only after pressing **Enter/F3** to confirm the setting or pressing **Enter/F3** at the SAVE? screen when available.

Setting Numeric Values

The numeric values are set using the ***Right*** and
Up-Arrow buttons.

1. Press ***Right-Arrow*** to select next digit and ***Up-Arrow*** to increment digit value. The selected digit will flash.

2. Press and hold ***Up-Arrow*** to auto-increment the display value. If you have made a mistake or would like to enter a new value, select the left-most digit, and press and hold the ***Right-Arrow*** button until all digits reset to zero.

3. Press the ***Enter*** button at any time to accept a setting or ***Menu*** button to exit without saving changes.

Note: the underscore in the graphic below is provided to show which digit would be flashing.
Scaling the 4-20 mA Input (INPUT)

It is **very important** to read the following information before proceeding to program the meter:

- The meter is factory calibrated prior to shipment to display 0.00 to 100.00 gal, which corresponds to the 4-20 mA input. The calibration equipment is traceable to NIST standards.
- A calibrated signal source is not needed to scale the meter.

Enter the *Input* menu to scale the meter to display the 4-20 mA input. The input can accept any signal from 4 to 20 mA.

> ⚠ **IMPORTANT**

- **Reverse Scaling**
  The meter can be scaled so that 4 mA represents the high end of the process value range being measured by the transmitter and 20 mA represents the low end of the process value range.
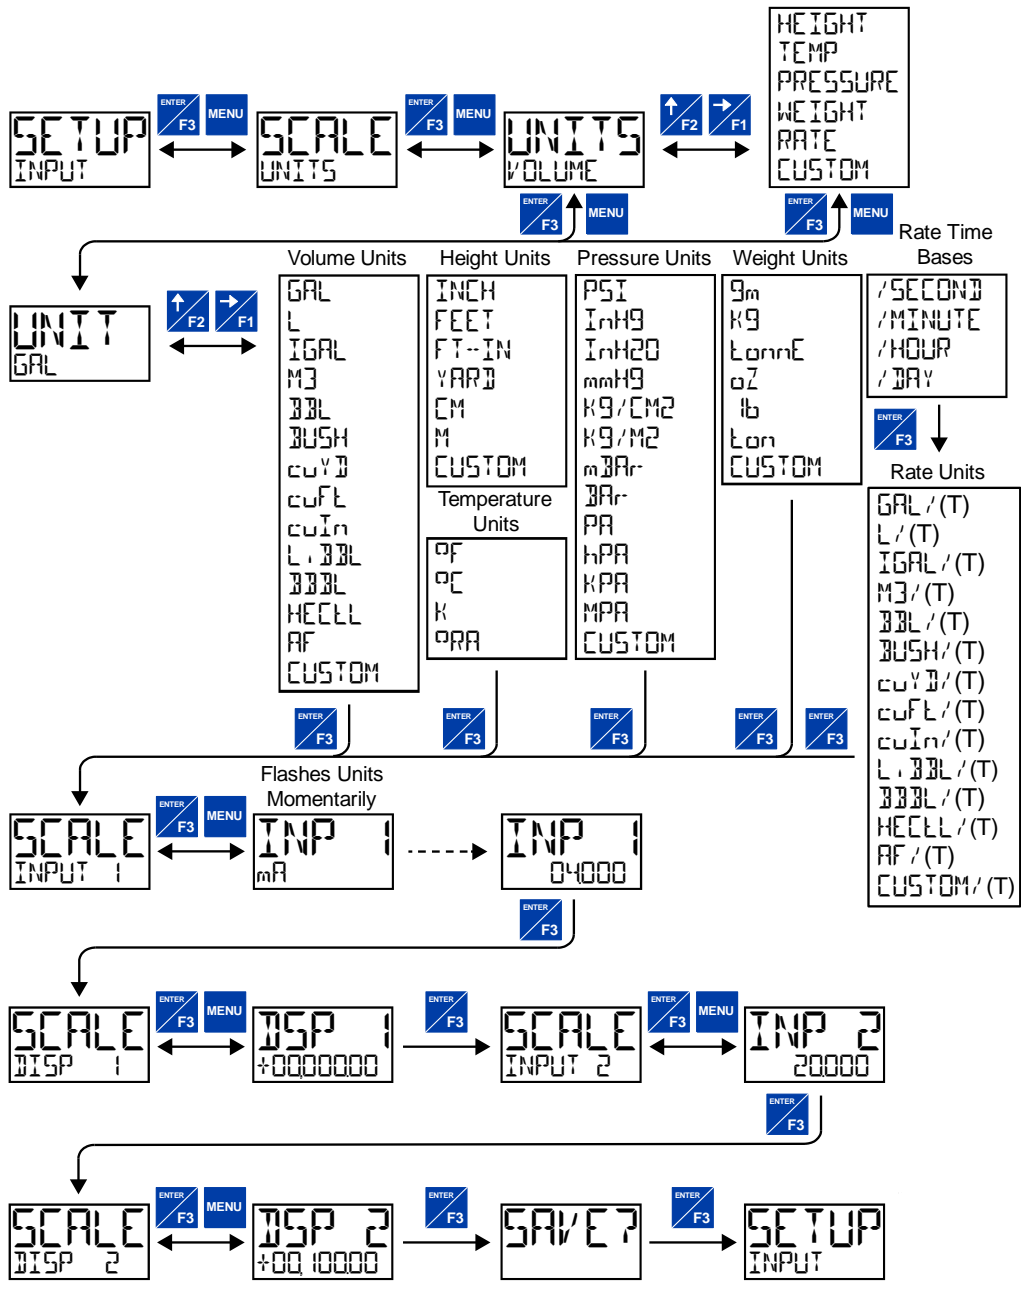

Available Unit Classes and Units

The meter has six available preprogrammed unit classes: *volume*, *height*, *temperature*, *pressure*, *weight*, and *rate*. Each unit class has the following available units to choose from:

Volume Units (VOLUME)	
GAL	Gallons
L	Liters
IGAL	Imperial Gallons
M3	Cubic Meters
BBL	Barrels
BUSH	Bushels
cuYD	Cubic Yards
cuFt	Cubic Feet
cuIn	Cubic Inches
L.BBL	Liquid barrels
BBBL	Beer barrels
HECLL	Hectoliter
AF	Acre-Foot
CUSTOM	Custom Unit

Height Units (HEIGHT)	
INCH	Inches
FEET	Feet
FT-IN	Feet & Inches
YARD	Yards
CM	Centimeters
M	Meters
CUSTOM	Custom unit

Temperature Units (TEMP)	
°F	Degrees Fahrenheit
°C	Degrees Celsius
K	Kelvin
°RA	Degrees Rankine

Pressure Units (PRESSURE)	
PSI	Pounds per square inch
InHg	Inches of mercury
InH2O	Inches of water

36

Setting Custom Units (CUSTOM)

When the desired unit class or unit of measure within a class is not available, a custom unit may be programmed. Select the CUSTOM menu (or CUSTOM unit within a unit class) to enter a custom unit name.

Text values are set using the *Right* and *Up* arrow buttons. Press *Right* arrow to select next character and *Up* arrow to increment character value. The selected character will flash. Press and hold the *Up* or *Right* arrow buttons to auto-increment or decrement the character. Press Enter to accept the character.

Notes:

- Press and hold the **Right-Arrow** while no character is being edited to erase all characters to the right of the flashing character
- Press and hold **Up** or **Right-Arrow** to auto-increment or decrement a selected character.
- All text values, including tags and alarm messages, are set in a similar fashion.

Setting the Display Features (DISPLAY)

The meter's display functions may be programmed using the *Display* menu. This menu consists of the following submenus: *Units*, *Decimal Point*, *Comma*, *Bargraph*, *Top*, and *Bottom*.
Changing the Engineering Units (UNITS)

It is possible to change the engineering units within the selected unit class without the need to re-scale the meter. When selecting a new unit from within the DISPLAY menu (e.g. changing from gallons (GAL) to liters (L)), the meter will automatically convert the display values to display the new unit. Enter the UNITS menu, select a new unit of measure from the list of predefined units, and press the **Enter** button. If entering a custom unit (CUSTOM), a custom conversion factor will need to be entered.

Changing the Decimal Point (DECPT)

The decimal point may be set with up to seven decimal places or with no decimal point at all.

Pressing the **Right-Arrow** moves the decimal point one place to the right until no decimal point is displayed, and then it moves to the left most position. Pressing the **Up-Arrow** moves the decimal point one place to the left.

If the dual-scale level feature is selected, the decimal point selections for PV1 & PV2 are enabled.

Enabling or Disabling Commas on the Bottom Display (COMMA)

The bottom display is set to show a comma separating the thousands and millions place by default if a numeric value is being displayed. This feature can be disabled or enabled using the *Comma* menu.

## Display Capabilities Optimization (TOP and BOTTOM)

Display Configuration Examples

The meter's dual-line display can be setup in multiple ways to provide an extremely informative view of the process variable being monitored. The following graphics show typical configurations:

Top Display: Process Variable
**Bottom Display**: Engineering Units or Tag

Top Display: Process Variable
Bottom Display: Toggling Between Units and Tag
Dual-Scale Mode:
**Top Display:** Toggling Between Process Variable and Units
Bottom Display: Toggling Between Process Variable (in different scale) and Different Units

Note: To display units as GALLONS, select custom units and enter the desired text.

Top Display: Toggling Between Process Variable and Units
Bottom Display: Percent

Top Display: Maximum Value
Bottom Display: Process Value
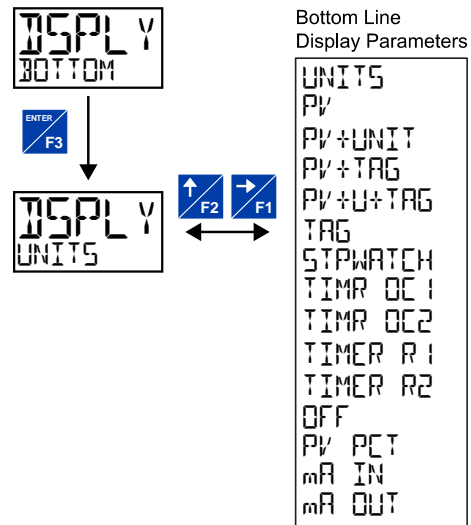

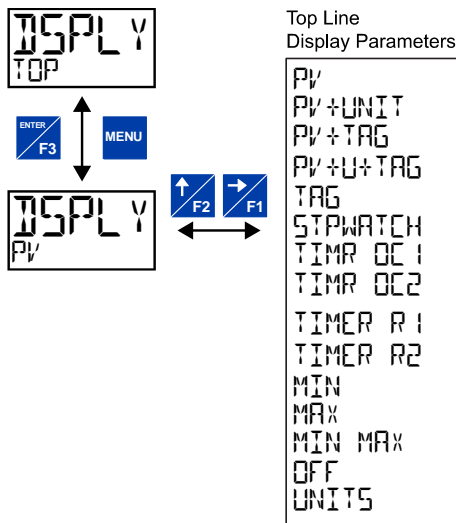

Configuring the Display (TOP and BOTTOM)

The display is configured using the TOP and BOTTOM menus in the DISPLY menu. Additional menus are available if the meter is in dual-scale mode to allow the second PV to be displayed on either the top or bottom display.

The top display (TOP) can display:

- Process Value (PV)
- Process Value 2 (dual-scale only; see PV 2 under advanced features menu)
- Alternating PV and Units
- Alternating PV and Tag
- Alternating PV, Units, and Tag
- Tag
- Stopwatch
- Open Collector 1 or 2 Timer
- Relay 1 or 2 Timer
- Minimum Value, Maximum Value, or Both
- Off (Blank)
- Units

The bottom display (BOTTOM) can display:

- Units
- Process Value (PV)
- Process Value 2 (dual-scale only; see PV 2 under advanced features menu)
- Alternating PV and Units
- Alternating PV and Tag
- Alternating Tag and Units
- Alternating PV, Units, and Tag
- Tag
- Stopwatch
- Open Collector 1 or 2 Timer
- Relay 1 or 2 Timer
- Off (Blank)
- PV's Percentage of Full Scale
- The mA Input
- The mA Output

Programming the Bargraph (BARGRAPH)

The bargraph is a standard feature on all PD4 models and is useful in applications where a visual representation of the process variable's percentage of full scale is desirable. This feature can be enabled or disabled using the *Bargraph* menu (BARGRAPH). The value displayed on the bargraph can be the percentage of full scale (PV PCT) or the percentage of a user-programmable range (PV). If the meter is in dual-scale mode, the bargraph can be assigned to display either PV1 or PV2 using this menu.
Programming the Outputs (OUTPUT)

All models come with two open collectors. Depending on the model purchased, the meter may include two solid-state relays, and one 4-20 mA output. The Output menu will only show options for the available outputs. See *Ordering Information* on page *10* for details.
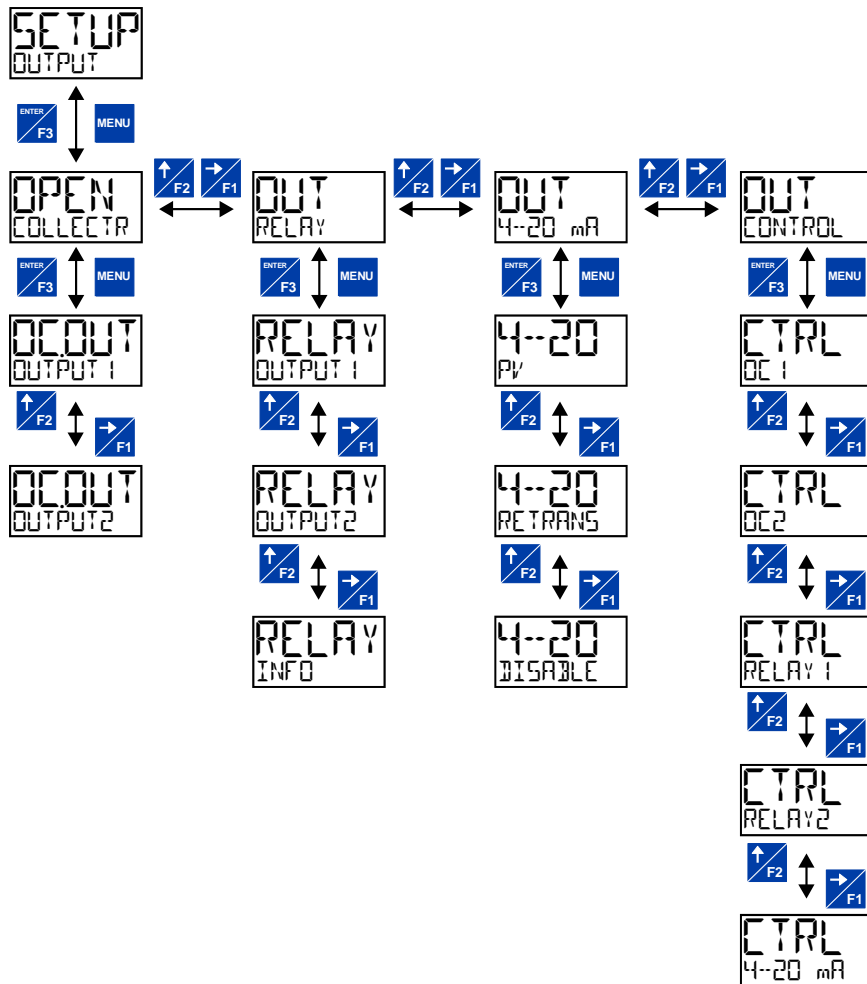

Open Collector Outputs (OPEN COLLECTR)

The meter is equipped with two NPN open collector outputs as a standard feature that may be set up for pulse outputs, alarms, timed pulses, or disabled.

Pulse outputs can be set to transmit the PV value (PV1 or PV2 if meter is in dual-scale mode). Output 2 may be used to generate a quadrature output based on the other open collector output. An output test mode is also selectable to generate pulses at a constant programmable frequency.

Alarms are available based on the PV value or the digital input. The alarm status will show on the display even if the output is not wired.

A timer output (TIMER) turns the open collector on and off at the specified time intervals. The timer can be set as single-shot or continuous timer.

The stopwatch output (STPWATCH) allows the open collector to be manually activated by starting the stopwatch. The stopwatch count can be displayed on the top or bottom display.

The output may be disabled by selecting DISABLE.

The Open Collector Outputs are programmed in the following manner:
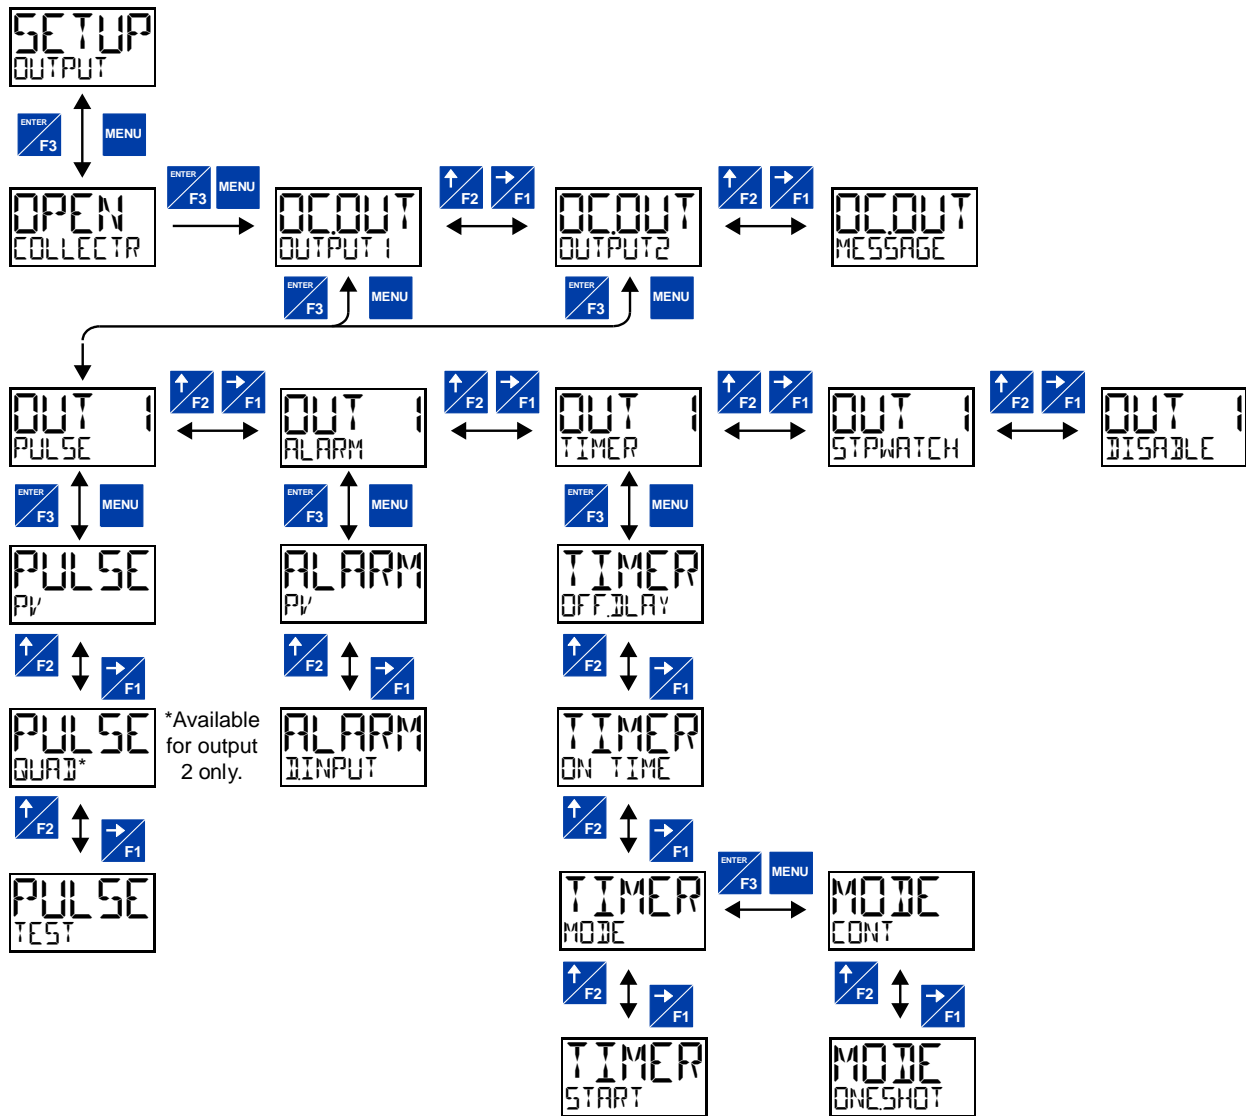

Pulse Output (PULSE)

The pulse outputs may be programmed to generate a scaled frequency based on the PV and a programmable factor. The factor determines the number of pulses per second generated per unit of measure. For example, if the meter display shows 100 gallons and the factor is set to 2, the number of pulses generated per second would be 200. The maximum frequency is 1,000 Hz.

Setting output 2 to quadrature will duplicate the other open collector output, but lag by 90 degrees out of phase. The other output should be programmed as desired for the quadrature output function and must be a pulse (PULSE) output selection. The quadrature maximum frequency for both outputs is 500 Hz.

The TEST option will output a fixed number of pulses per second based on the FREQ value entered.

*Available for output 2 only.

Flashes Units

Alarm (ALARM)

Alarm outputs may be assigned to the PV or the digital input. When assigned to the PV, the alarm may be set as either a high alarm or a low alarm. Alarm actions (AUTO, AUTOMAN, LATCH, L--CLEAR) determine how and when the alarm should be reset. They operate as follows:

- **Automatic (AUTO):** Alarm will reset automatically once the alarm condition has cleared.
- **Automatic/Manual (AUTOMAN):** Alarm will reset automatically once the alarm condition has cleared but can also be reset using the *Enter* (ACK) button (or whichever function key is set to acknowledge) at any time.
- **Latching (LATCH):** Alarm must be reset manually and can be done so at any time. Press the *Enter* (ACK) button at any time to clear the alarm.
- **Latching with Reset after Clear (L--CLEAR):** Alarm must be reset manually and can only be done so after the alarm condition has cleared. Press the *Enter* (ACK) button after the alarm condition has cleared to reset the alarm.

If the alarm is set to PV, a set and reset point must be programmed. The set point is the display value at which the alarm will turn on and the reset point is the display value at which the alarm will turn off. If the set point is lower than the reset point, the alarm will be a low alarm; if the set point is higher than the reset point, the alarm will be a high alarm. The digital input alarm will trigger whenever the digital input is triggered.

For both the PV and digital input alarms, a delay before the alarm is turned on or off may be set, as well as a fail-safe feature which reverses the on/off operation of the open collectors.

Alarm states will be displayed on the meter even if no open collector output is physically connected. These may include a red LED backlight, flashing PV value (PV alarm only), and a programmable alarm message.

43
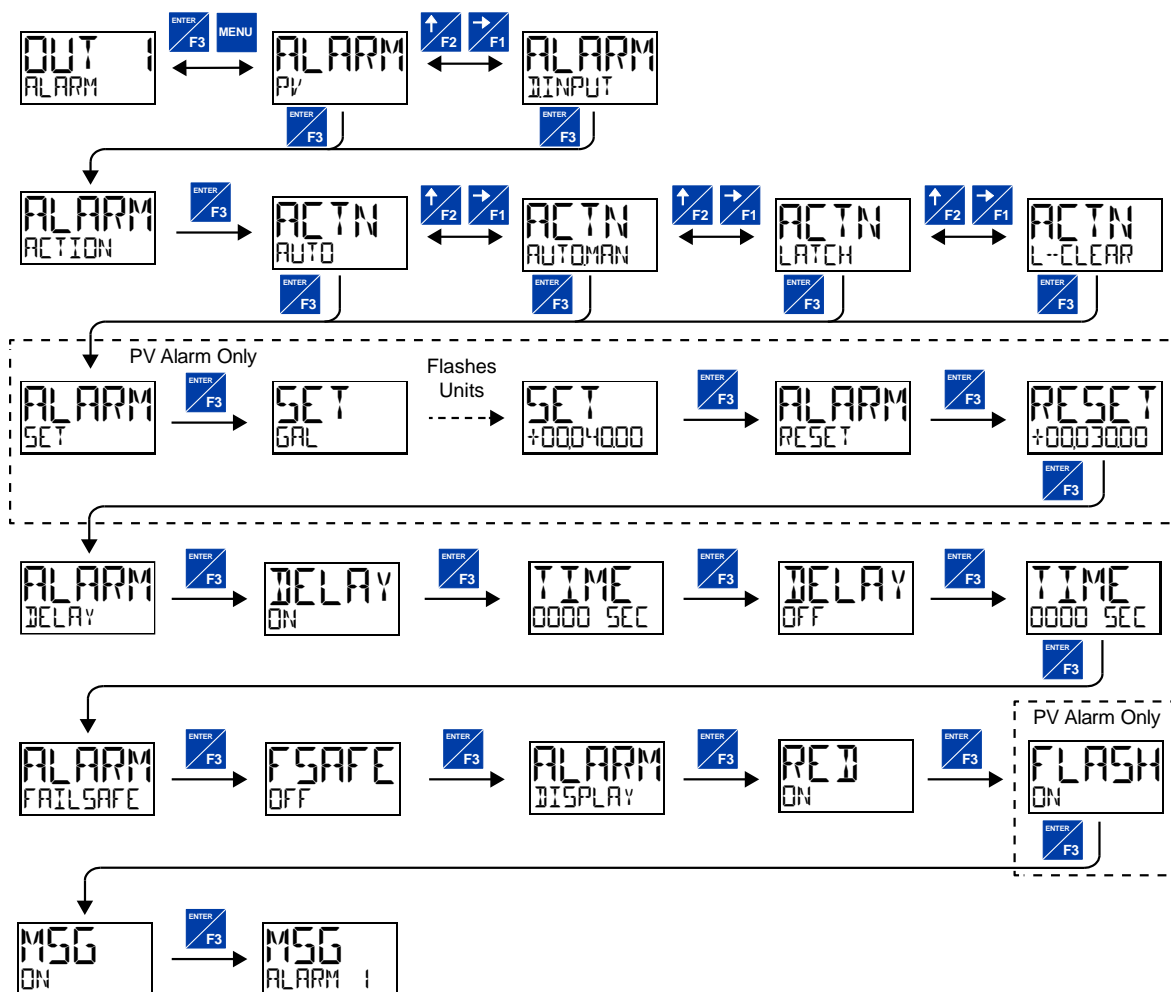

Flashing Red Alarm (RED)

The last two lines in the preceding menu flow chart show how to program the display to turn red, flash, and display a message when an alarm occurs.

Alarm 1 is High Alarm:	Alarm 2 is Low Alarm:
140 HI LEVEL	10 LO LEVEL

Timer (TIMER)

The timer output may be set to generate the timed pulse only once (ONESHOT) or continuously (CONT).

The timer output produces a constant width pulse at a constant frequency, if set as continuous timer. Program the *Off Delay* (OFF.DLAY) from 1 second to 99 hours 59 minutes and 59 seconds. This is the time it takes from selecting START to turning on the output and for how long the output is off in continuous mode.

Program the *On Time* (ON TIME) for the active low pulse from 1 second to 99 hours 59 minutes and 59 seconds (pulse width). This is the period of time for which the output will remain on.

Select *Start* (START) to begin outputting the constant timed pulse.

Select *Stop* (STOP) to end outputting the constant timed pulse.

Function keys or the digital input may be assigned to start and stop timer functions (see the USER menu in the *Advanced Menu*).
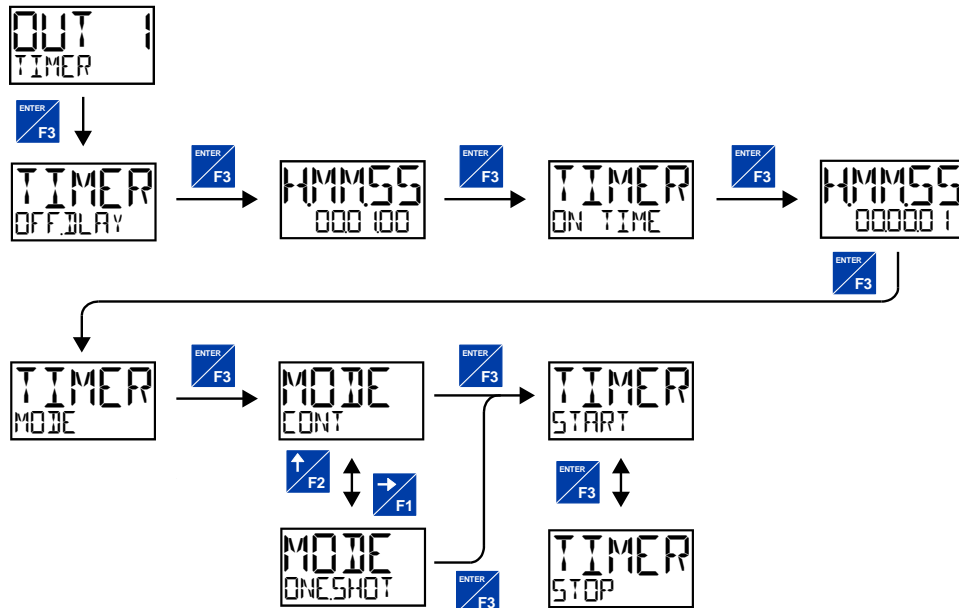

Stopwatch (STPWATCH)

The stopwatch function may be used to manually run and control a process for a specific time interval up to 99 hrs., 59 min, and 59 seconds. The stopwatch function may be assigned to any open collector. There are three settings needed to use the function effectively.

1. Assign stopwatch to either top or bottom display line
2. Assign the open collector to control the process (on/off)
3. Assign a function key or digital input to start/stop the stopwatch

Application Example

To maintain consistency of a product, it is necessary to take and test samples at different times throughout the day. The stopwatch function is used to open and close a solenoid valve to know the exact amount of time needed to complete the desired sample. Once this is determined, the timer function can be used to automatically take a sample (batch) based on the time determined using the stopwatch function.

Setup: Assign the following to *Stopwatch Function*

- Bottom display line
  (see pages 37 & 39 for details how to change the display)
- Relay 1
  (see pages 41 & 46 how to change Open Collector and or Solid-State Relay functionality)
- F3: Start/Stop
  (see pages 62 & 63 for details on how to change the function keys)

Procedure

- Press F3 to start the stopwatch; relay 1 turns on and the process starts running.
- Press F3 to stop the stopwatch; relay 1 turns off and the process stops.
- The bottom display indicates the time it took to complete the sample.

Solid-State Relay Outputs (RELAY)

The meter can be optionally equipped with two solid-state relays that may be set up for alarms, timer, stopwatch, or pump control. Alternatively, they may be disabled.

Alarms are available based on the PV value or the digital input. The alarm status will show on the display even if the output is not wired.

Pump control allows the relay to turn on and off a pump at specified on and off points. This can be done using only one of the relays to control one pump (ON--OFF) or using both relays in tandem to alternate between two pumps (ALTERN).
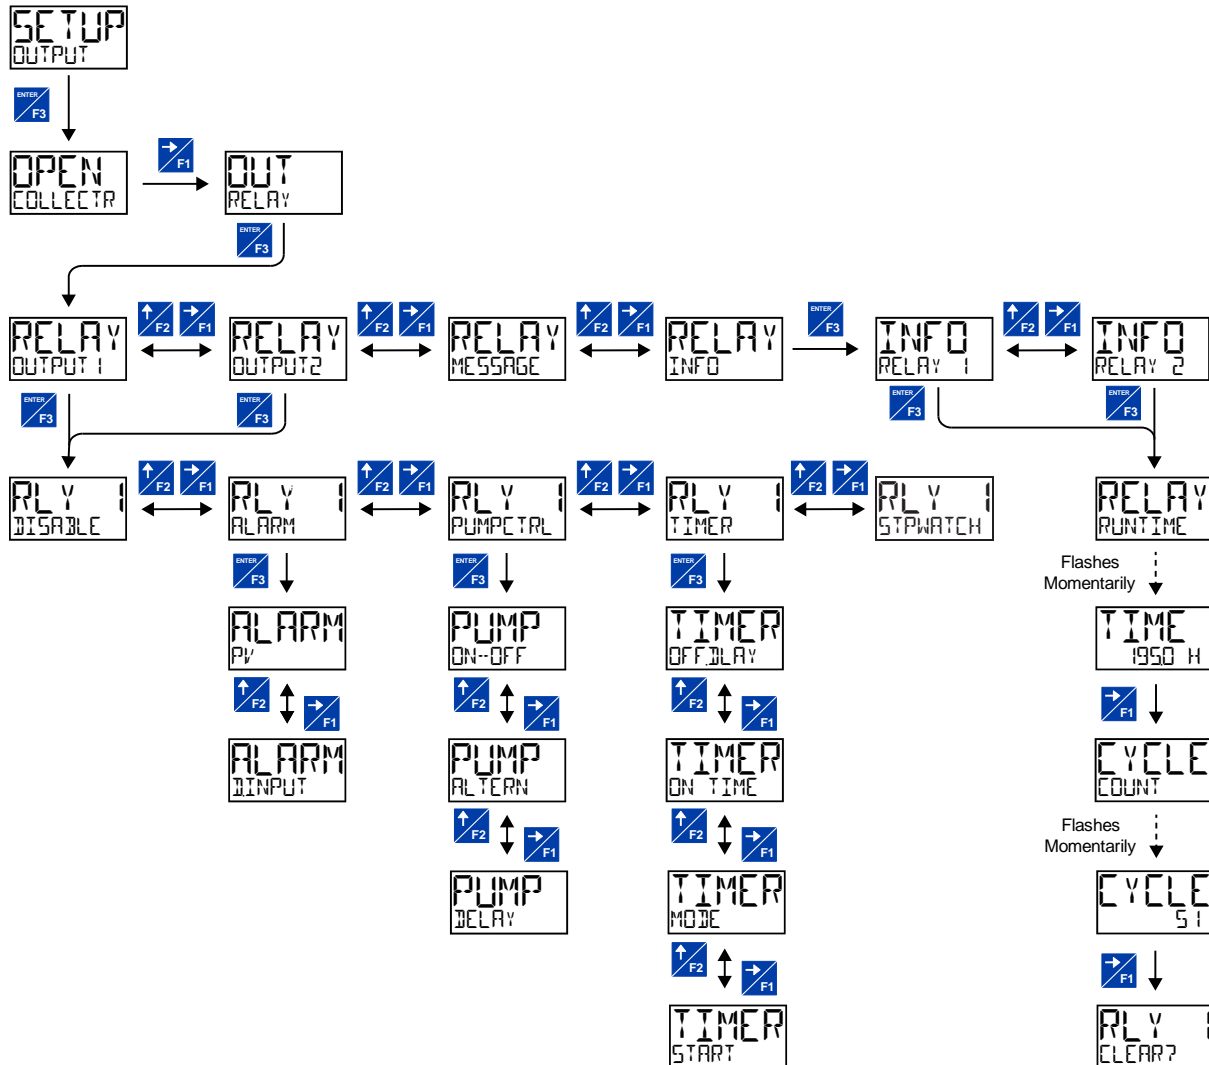

A timer output (TIMER) turns the relay on and off at the specified time intervals. The timer can be set as single-shot or continuous timer.

The stopwatch output (STPWATCH) allows the relay to be manually activated by starting the stopwatch. The stopwatch count can be displayed on the top or bottom display.

The output may be disabled by selecting DISABLE.

⚠️ **CAUTION**

- During setup, the relays do not follow the input and they will remain in the state found prior to entering the Relay menu.

Alarm (ALARM)

Alarm outputs may be assigned to the PV or the digital input. When assigned to the PV, the alarm may be set as either a high alarm or a low alarm. Alarm actions (AUTO, AUTOMAN, LATCH, L-CLEAR) determine how and when the alarm should be reset. They operate as follows:

- **Automatic (AUTO):** Alarm will reset automatically once the alarm condition has cleared.

- **Automatic/Manual (AUTOMAN):** Alarm will reset automatically once the alarm condition has cleared but can also be reset using the *Enter* (ACK) button (or whichever function key is set to acknowledge) at any time.

- **Latching (LATCH):** Alarm must be reset manually and can be done so at any time. Press the *Enter* (ACK) button at any time to clear the alarm.

- **Latching with Reset after Clear (L-CLEAR):** Alarm must be reset manually and can only be done so after the alarm condition has cleared. Press the *Enter* (ACK) button after the alarm condition has cleared to reset the alarm.

If the alarm is set to PV, a set and reset point must be programmed. The set point is the display value at which the alarm will turn on and the reset point is the display value at which the alarm will turn off. If the set point is lower than the reset point, the alarm will be a low alarm; if the set point is higher than the reset point, the alarm will be a high alarm. The digital input alarm will trigger whenever the digital input is triggered.

For both the PV and digital input alarms, a delay before the alarm is turned on or off may be set, as well as a fail-safe feature which reverses the on/off operation of the relays.

Alarm states will be displayed on the meter even if no relay output is physically connected. These may include a red LED backlight, flashing PV value (PV alarm only), and a programmable alarm message.

47
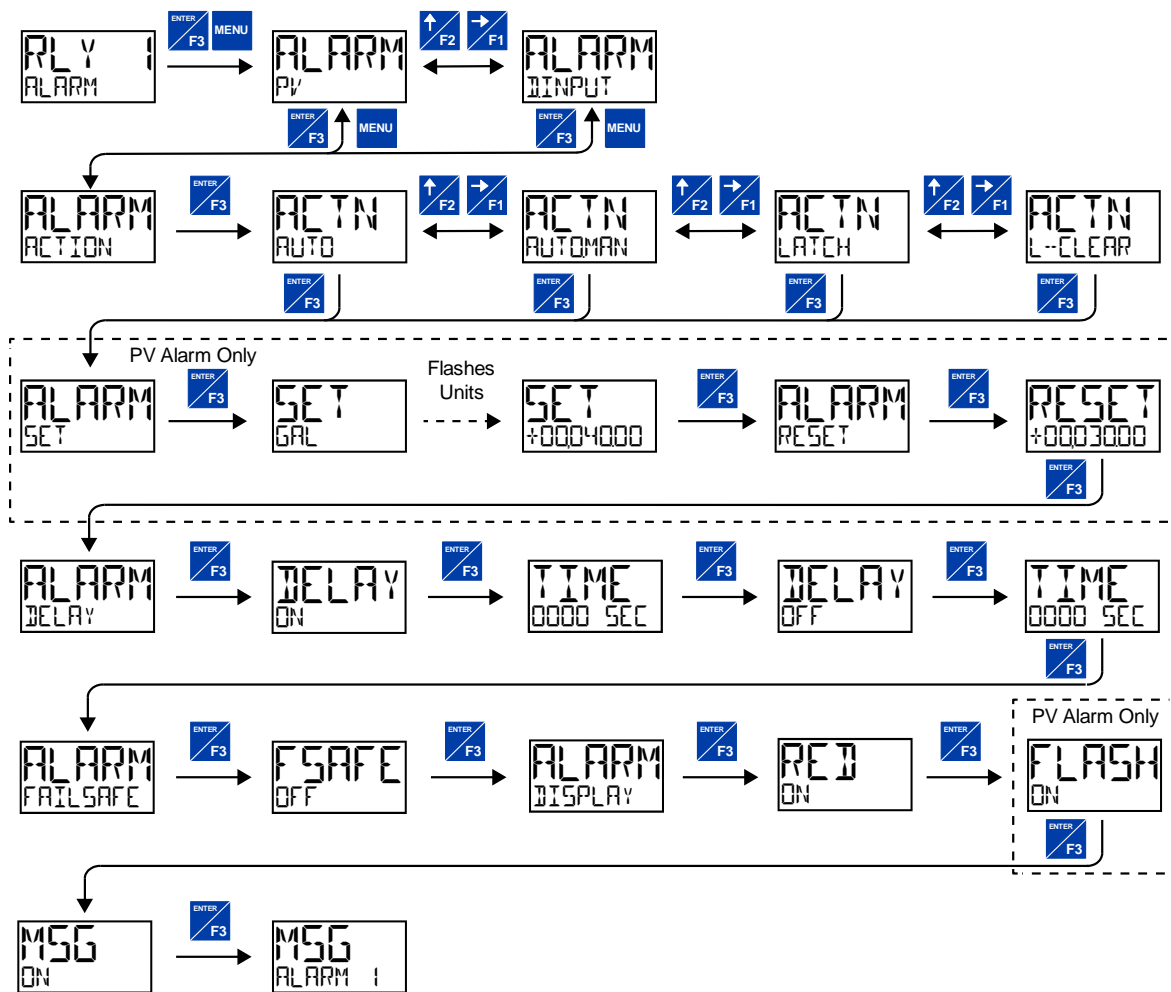

Pump Control (PUMPCTRL)

The pump control output is used in situations where the relays are used to control pumps. There are two options available for controlling pumps: on-off (ON--OFF) and pump alternation (ALTERN).

ON--OFF will turn the relay on at a programmed *on* point and off at a programmed *off* point. Setting the *on* point higher than the *off* point will make the output activate on a high PV value; setting the *on* point lower than the *off* point will make the output activate on a low PV value. The relay will reset automatically.

For pump control applications where two similar pumps are used to control the level of a tank or a well, it may be desirable to have the pumps operate alternately. This prevents excessive wear and overheating of one pump over the lack of use of the other pump. Pump alternation uses both relays in tandem to alternate between two similar pumps. The ALTERN menu is only available under Output 1 and will automatically set Output 2 to pump alternation as well. Use the pump *Alternation Time* setting (ALT.TIME) to control the alternation based on runtime in addition to level cycles.

On/Off Pump Control (ON--OFF)

When programming a single pump to turn on and off, the *on* and *off* points must be programmed. The relay will activate at the *on* point and deactivate at the *off* point. On and off delays may be programmed to delay the activation or deactivation of the relay by a certain number of seconds after reaching either the *on* point or *off* point.
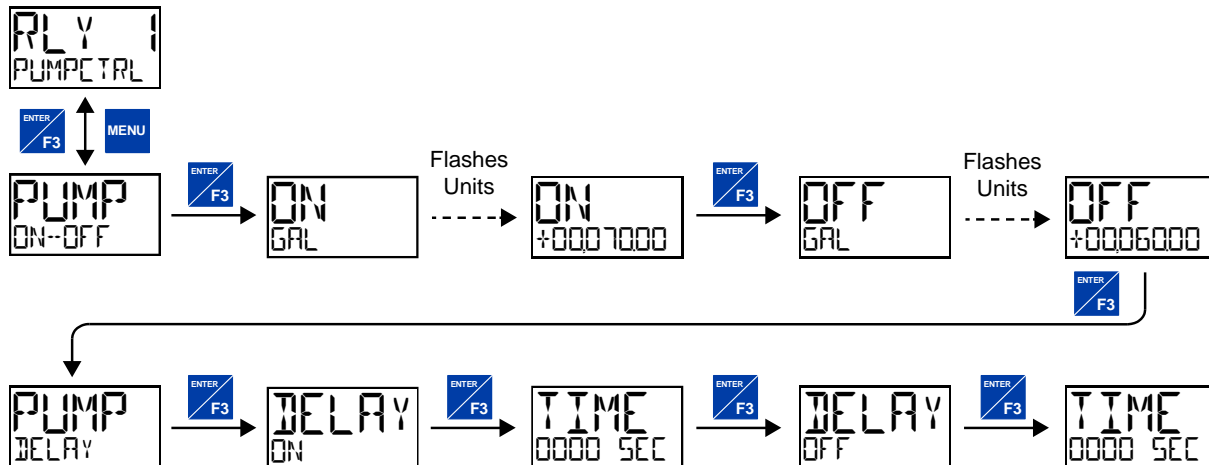

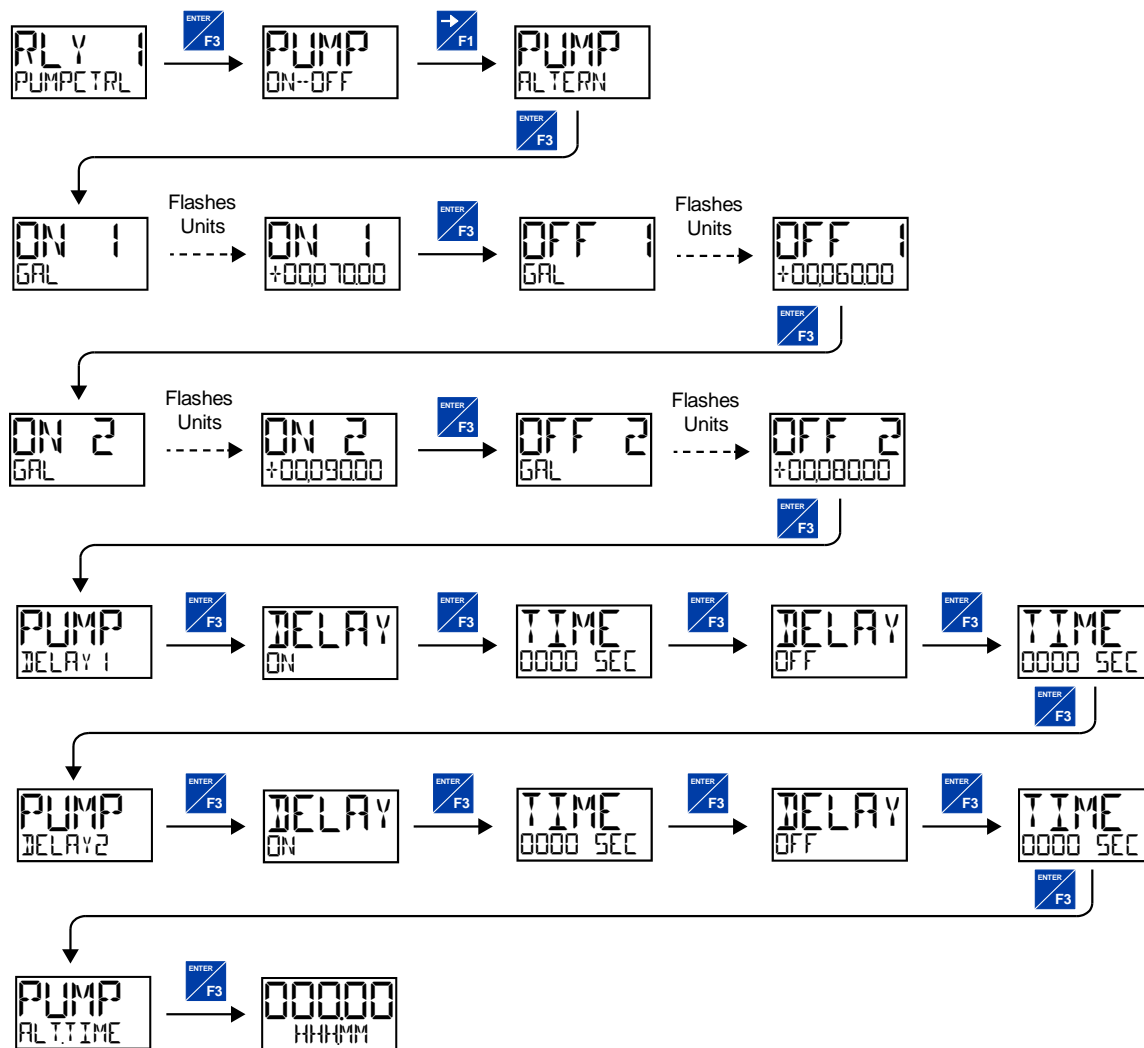

Pump Alternation (ALTERN)

Pump alternation sets the two relays to alternate every time the first *on* point (ON 1) is reached. The active relay will turn off once the first *off* point (OFF 1) is reached. If the PV reaches the second *on* point (ON 2), the other relay will also turn on. The second relay will turn off once the second *off* point (OFF 2) is reached and the first relay will remain active until the first *off* point (OFF 1) is reached.

On and off delays may optionally be programmed for each *on* and *off* point to delay the activation or deactivation of the relays by a certain number of seconds after reaching either the *on* point or *off* point.

For pumps that typically remain on extensively, the alternation time (ALT.TIME) parameter sets a period of relay on-time after which the relays should alternate. For example, if the alternation time is set to one hour, pump 1 will turn off after one hour of runtime regardless of the level reading, at which point pump 2 becomes the active pump. Pump 2 will run until one hour has passed, or the tank has reached a desirable level; whichever happens first. By using the proper on/off points, the alternation can be set up so that the first pump on is the first pump off. This is desirable when the two pumps are of similar rating.

### Pump Control with Alternation & Alarm Example

The following is a typical application where the relays and open collectors are used for pump alternation and high and low level alarm.

Pump and Alarm On & Off Point Programming

Relay	On Point	Off Point	Function
1	7000	2000	Controls backup pump
2	6000	2000	Controls main pump

OC	On Point	Off Point	Function
1	7000	6500	Trips high alarm
2	1000	1500	Trips low alarm

The following graphics provide a visual representation of a typical pump alternation application:

Relay #2 turns the main pump on at 6000 gallons and turns it off at 1000 gallons.

With the Pump Alternation feature activated, the next time the level reaches 6000 gallons, relay #1 transfers and starts the backup pump.
If the backup pump is not able to keep up, and the level reaches 7000 gallons, relay #2 transfers and starts the main pump as well. Open collector #1 trips the High Level Alarm, the display turns red and flashes "Hi Level" message indicating an alarm condition. The High Level Alarm resets at 6500 gallons.
Once the level has dropped below the reset points, both relays will turn off. If the Main Pump fails to turn off, open collector #2 trips the Low Level Alarm at 1000 gallons to warn against the pump running dry. The Low Level Alarm resets at 1500 gallons.

Timer (TIMER)

The timer output may be set to generate the timed pulse only once (ONESHOT) or continuously (CONT). The timer output produces a constant width pulse at a constant frequency, if set as continuous timer.

Program the *Off Delay* (OFF.DLAY) from 1 second to 99 hours 59 minutes and 59 seconds. This is the time it takes from selecting START to turning on the output and for how long the output is off in continuous mode.

Program the *On Time* (ONTIME) for the active low pulse from 1 second to 99 hours 59 minutes and 59 seconds (pulse width). This is the period of time for which the output will remain on.

Select *Start* (START) to begin outputting the constant timed pulse. Select *Stop* (STOP) to end outputting the constant timed pulse. Function keys or the digital input may be assigned to start and stop timer functions (see the USER menu in *Advanced*).
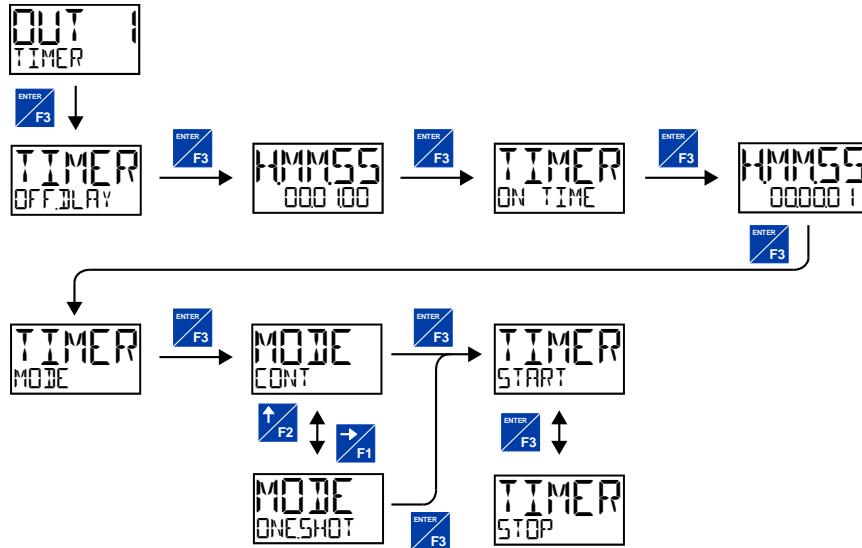

Stopwatch (STPWATCH)

The stopwatch function may be used to manually run and control a process for a specific time interval up to 99 hrs., 59 min, and 59 seconds. The stopwatch function may be assigned to any relay. There are three settings needed to use the function effectively.

1. Assign stopwatch to either top or bottom display line
2. Assign the relay to control the process (on/off)
3. Assign a function key or digital input to start/stop the stopwatch

Application Example

To maintain consistency of a product, it is necessary to take and test samples at different times throughout the day. The stopwatch function is used to open and close a solenoid valve to know the exact amount of time needed to complete the desired sample. Once this is determined, the timer function can be used to automatically take a sample (batch) based on the time determined using the stopwatch function.

Setup: Assign the following to *Stopwatch Function*

- Bottom display line
  (see pages 37 & 39 for details how to change the display)
- Relay 1
  (see pages 41 & 46 how to change Open Collector and or Solid-State Relay functionality)
- F3: Start/Stop
  (see pages 62 & 63 for details on how to change the function keys)

Procedure

- Press F3 to start the stopwatch; relay 1 turns on and the process starts running.
- Press F3 to stop the stopwatch; relay 1 turns off and the process stops.
- The bottom display indicates the time it took to complete the sample.

Runtime & Cycle Count (INFO)

The relay information menu shows runtime and cycle count for each relay. These values may be cleared at any time by selecting the *Clear* option (CLEAR?).

Isolated 4-20 mA Output (4-20 mA)

The *4-20 mA* menu is used to scale the isolated 4-20 mA output based on display values. This menu is not present on models without a 4-20 mA output option.

The 4-20 mA analog output can be scaled to provide a 4-20 mA signal for any PV display range or to simply retransmit the 4-20 mA input. The output may be disabled (DISABLE), and will only output the minimum signal.

Overrange and underrange values determine what mA signal the meter will output if the mA input is underrange (<3.5 mA) or overrange (>20.5 mA). This value may be set to 1 mA, 3.5 mA, 3.8 mA, 20.5 mA, 20.8 mA, 23 mA, or disabled.

No equipment is needed to scale the analog output; simply program two display values and corresponding mA output signals.
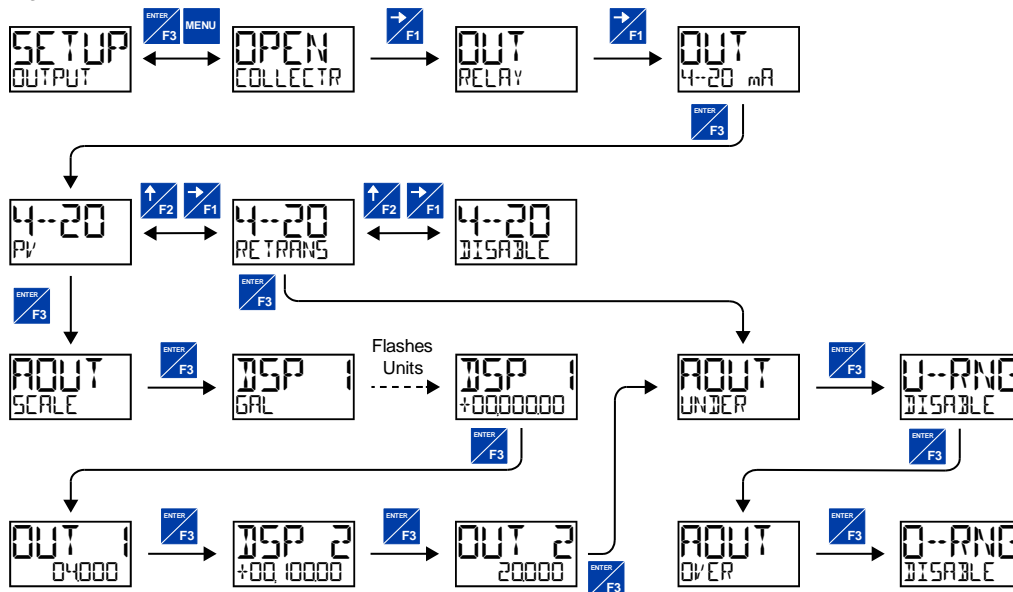

Process Variable (PV)

To scale the analog output, enter display value 1 and a corresponding analog output value for this display, and enter display value 2 and a corresponding analog output value for this display value. This will provide a scaled linear analog output.

Retransmit (RETRANS)

This option will retransmit the 4-20 mA analog input without the need to scale the output.

Output Manual Control (CONTROL)

The *Control* menu is used to control the open collector outputs, 4-20 mA analog output, and the relays manually, ignoring the input. Each open collector, relay, and analog output can be programmed independently for manual control. Selecting automatic control sets all relays and analog output for automatic operation.

After selecting manual control for a specific output, you can set the output value. To change the output value, return to the Control menu, select the output to control, select manual control, and enter a new value.
Advanced Features Menu (ADVANCED)

To simplify the setup process, functions not needed for most applications are located in the *Advanced Features* menu. The options under advanced features include *advanced PV setup*, *cutoff*, *filter*, *password*, *function key programming*, and *system settings*.
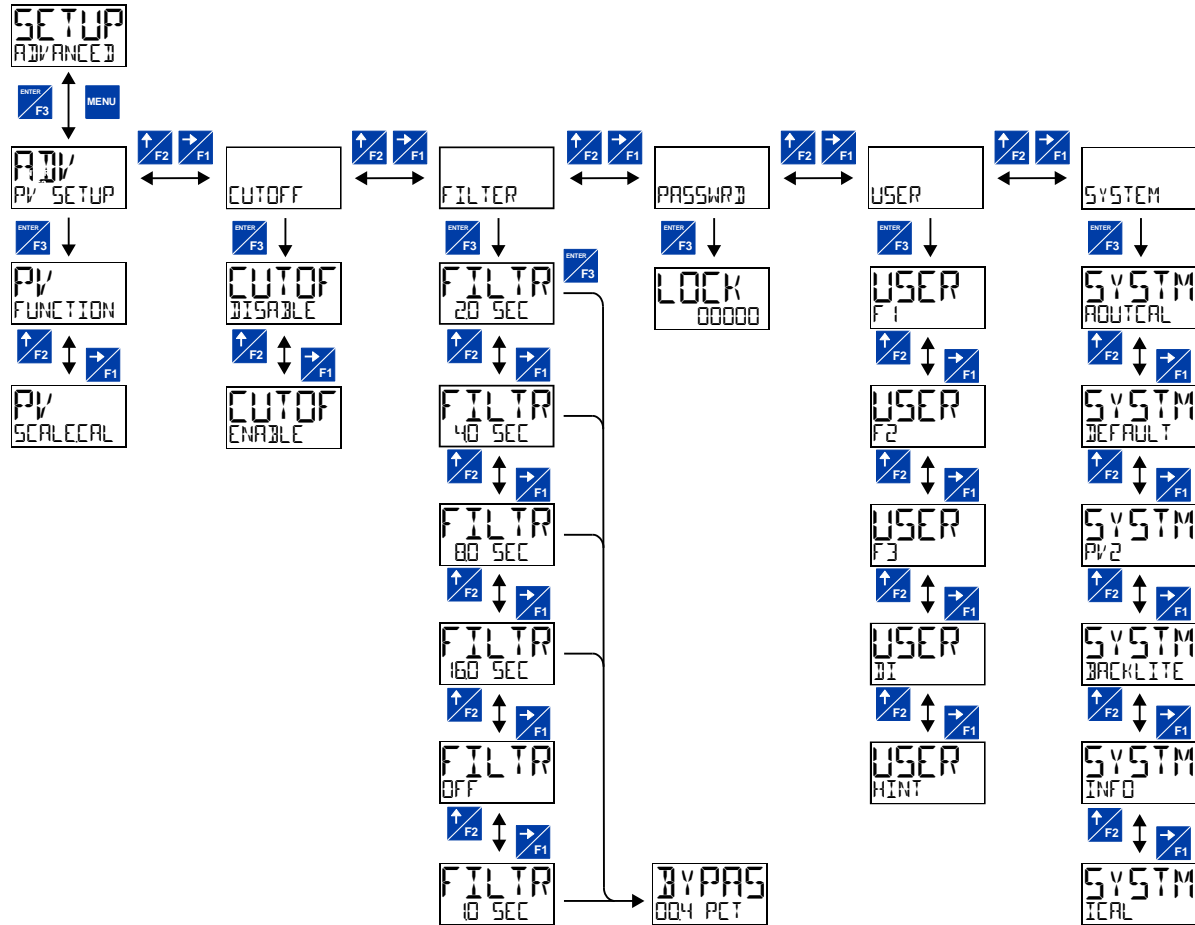

Advanced Process Variable Setup (ADV PV SETUP)

The Advanced PV Setup menu contains options to apply input signal conditioning functions to the input and to scale/calibrate the input signal.

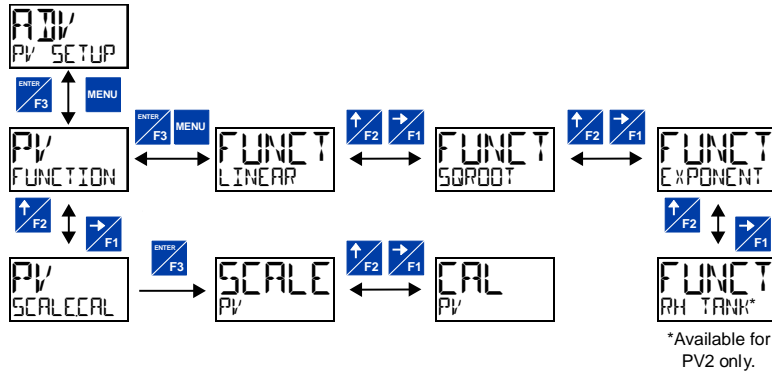

*Available for PV2 only.

Input Signal Conditioning Functions (FUNCTION)

The *Function* menu is used to select the input signal conditioner applied to the input: linear, square root, programmable exponent, or round horizontal tank volume calculation. Multi-point linearization is part of the linear function selection.

Meters are set up at the factory for linear function with 2-point linearization. The linear function provides a display that is linear with respect to the input signal.

Using MeterView XL

MeterView XL makes programming the input signal conditioning functions quick and easy. Go to the input/scale menu and select the desired function from the drop down menu in the "scale input" section.
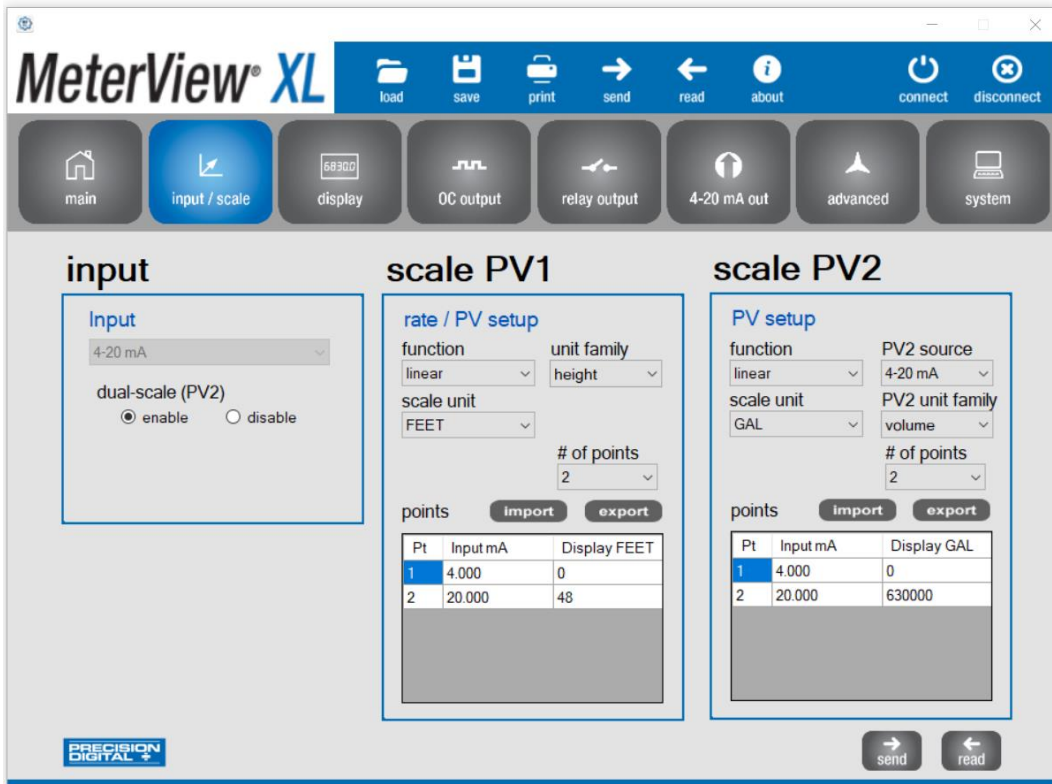

Square Root Linearization (**SQROOT**)

The square root function can be used to linearize the signal from a differential pressure transmitter and display flow rate in engineering units.
PD4-6604 Displaying Flow Rate by Applying the Square Root Function to the Output of a DP Transmitter.
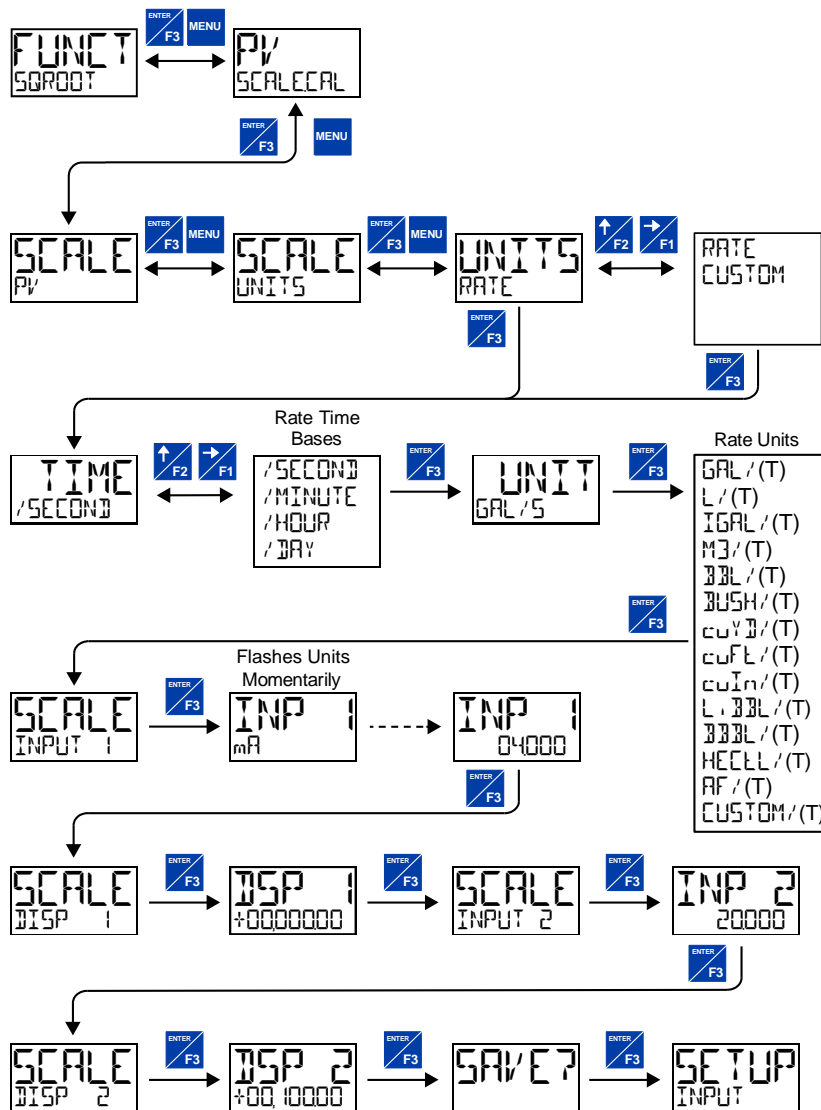

Programmable Exponent Linearization (EXPONENT)

The programmable exponent can be used to linearize the signal from level transmitters in open-channel flow applications using weirs and flumes.

The PD4-6604, in combination with an ultrasonic level transmitter, makes for an economical way to measure and display open channel flow rate in most weirs and flumes. A guide such as the ISCO Open Channel Flow Measurement Handbook can provide the user with all the information needed: the exponent used in the flow equation for the desired flow units and the flow rate for any given head height. For example, to display the open channel flow rate from a 3" Parshall flume, the ISCO handbook advises the exponent is 1.547 and at the maximum head height of 3.0 feet, the flow rate is 3.508 MGD.

**3" Parshall Flume Discharge Table**

Formula: CFS= 0.9920 $H^{1.547}$
GPM= 445.2 $H^{1.547}$
MGD= 0.6411 $H^{1.547}$
Where: H = Head in feet

Table 12-3			
Head (Feet)	CFS	GPM	MGD
3.00	5.428	2436	3.508

ISCO Open Channel Flow Measurement Handbook, 3rd edition

With this information the PD4-6604 should be programmed in the following fashion. This setup assumes the level transmitter is programmed to output 20 mA at the maximum head height of 3.00 feet; but any mA value at a head height with a known flow rate may be used.

Function	Desired	Programming
Open Channel Flow	3" Parshall flume	Set Programmable Exponent to 1.547
Flow Rate	Millions of Gallons per Day (MGD)	Set 4 mA = 0 20 mA = 3.508
Display	Display Flow Rate	Set upper display for flow rate display and lower display units/tag for MGD.

To display both flow rate and total, consider Precision Digital's Model PD4-6624 Flow Rate Totalizer.

Multi-Point Linearization (LINEAR)

Up to 32 linearization points can be selected for PV1 and PV2 under the LINEAR function. Multi-point linearization can be used to linearize the input so the meter can display volume from non-linear tanks or to convert level to flow using weirs and flumes with complex exponent. These points are established via direct entry (SCALE) or with a live calibration signal source (CAL).

If the dual-scale level feature has been selected, the menus for PV1 & PV2 are enabled.
MeterView XL showing the linear points setup feature. Up to 32 points can be selected for PV1 and PV2.
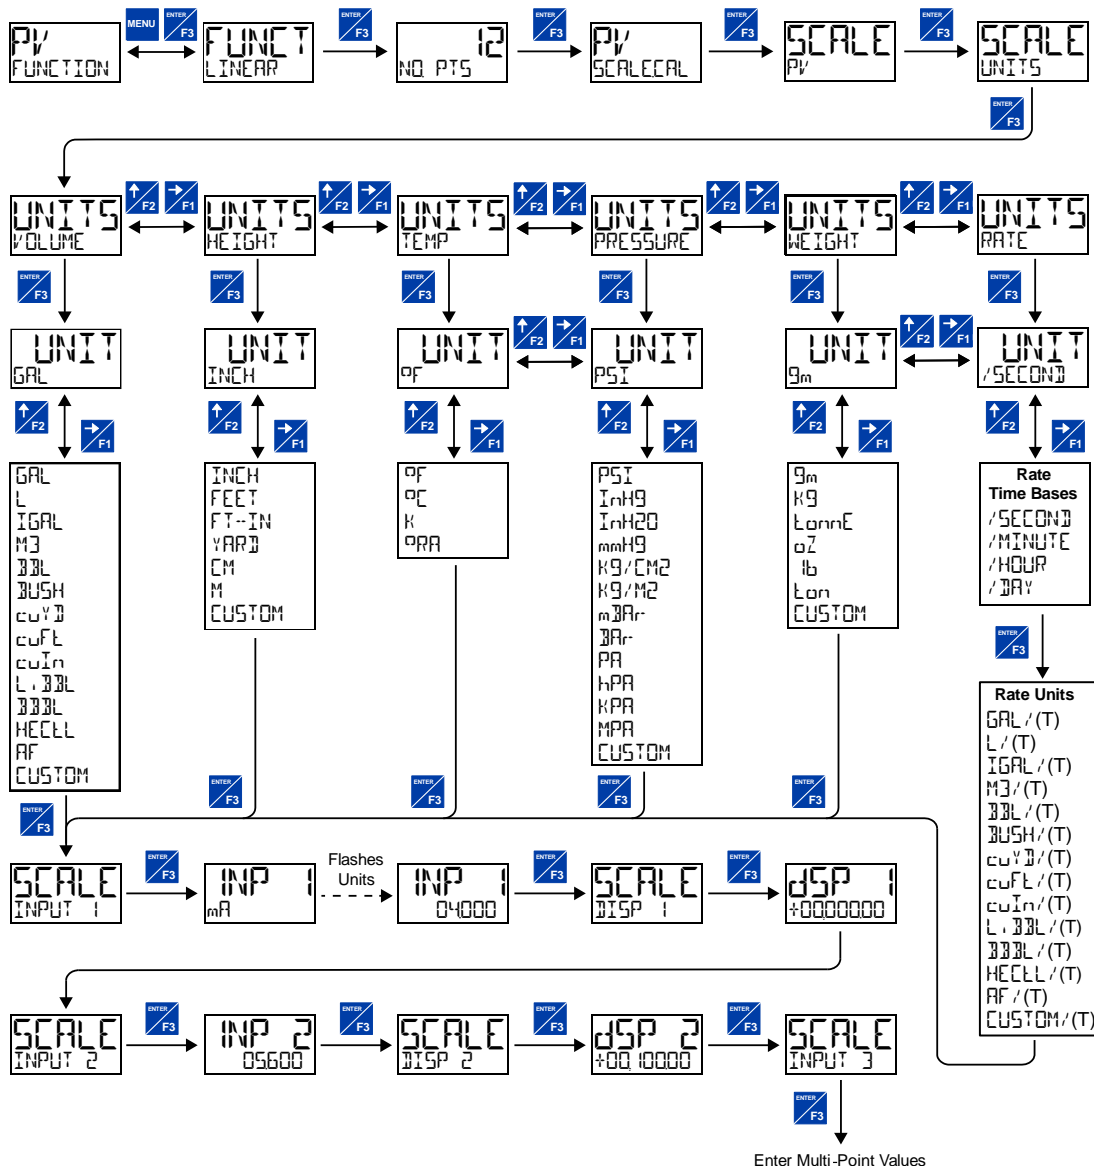

Round Horizontal Tank Linearization (RH TANK)

This function automatically calculates the volume in a round horizontal tank with flat ends. It is only available for PV2 while the meter is in dual-scale mode.

For instructions on how to enable PV2 see *Changing System Settings* (SYSTEM) on page *64.*

Set the display for the desired decimal point and engineering units before entering the round horizontal tank function. Select units (inches or cm) for the tank dimensions. Enter the diameter and the length in inches or cm and the results will be calculated automatically in US gallons or liters. The unit of measure for the volume can be changed using the display menu.

See *Changing the Engineering Units* (UNITS) on page *37* and *Available Unit Classes and Units* on page *36* for a list of available volume units. There is no need to enter scaling values.
MeterView XL Round Horizontal Tank Function Automatically Calculates the Volume Once the Diameter and the Length of the Tank are Entered.
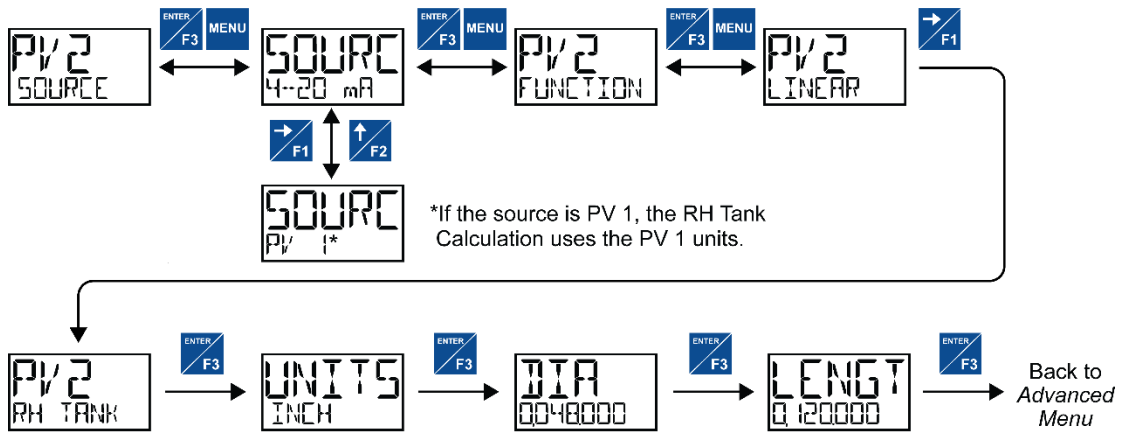

*If the source is PV 1, the RH Tank Calculation uses the PV 1 units.

PD4-6604 Displaying Height in Feet and Volume in Gallons in a Round Horizontal Tank Using the RHT Linearization Feature.

Advanced Scaling and Calibration (SCALECAL)

This menu offers options to scale or calibrate the meter.

Scaling the Input (SCALE)

The scale menu in the *Advanced* menu is the same as the scale menu in the *Input* menu. See *Scaling the 4-20 mA Input* (INPUT) on page *35* for details about scaling the meter.

Calibrating the Input (CAL)

> To scale the meter without a signal source, refer to
> *Scaling the 4-20 mA Input* (INPUT), page *35*.

The meter can be calibrated to display the process in engineering units by applying the appropriate input signal and following the calibration procedure. The CAL menu can be used either with a calibrated current source or with a live signal coming from a 4-20 mA transmitter connected to the process being measured.

During calibration, the mA input value will be displayed as INP 1 and INP 2. Adjust the input source until the desired mA value is shown.

The use of a calibrated signal source is required.
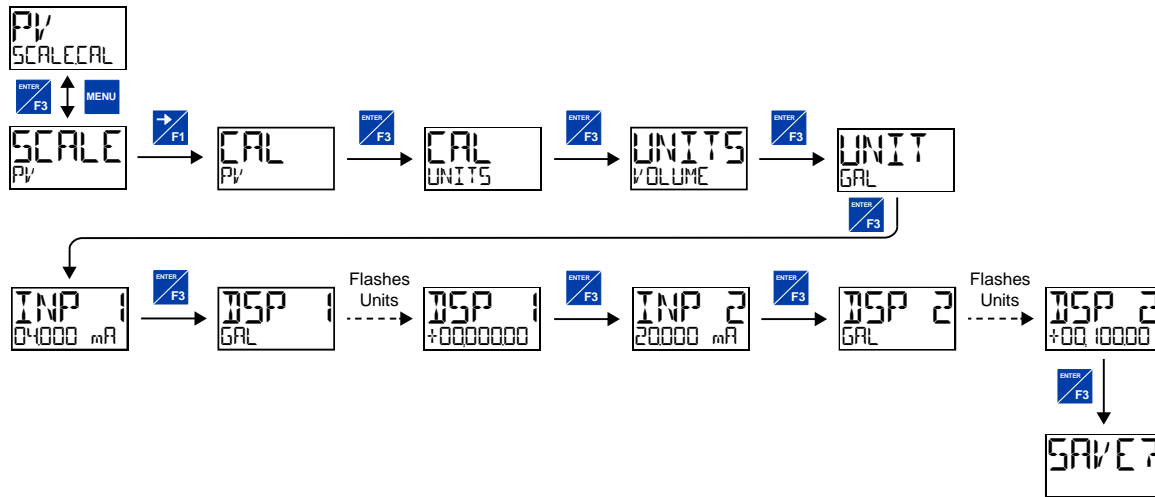

Follow these steps to calibrate the input:

1. After accessing the SCALECAL menu, press the **Right-Arrow** button to scroll to the *Calibration* menu (CAL PV) and press *Enter*.

2. Select the appropriate units for the desired process variable, then press **Enter**. For information on units, see *Available Unit Classes and Units* on page *36*.

3. The meter displays INP 1. Apply a known signal and press **Enter**. The display will flash while accepting the signal.

4. After the signal is accepted, the meter displays DSP 1. Enter a corresponding display value for the input signal, and press **Enter** to accept.

5. The meter displays INP 2. Apply a known signal and press **Enter**. The display will flash while accepting the signal.

6. After the signal is accepted, the meter displays DSP 2. Enter a corresponding display value for the input signal and press **Enter** to accept.

7. After completing calibration, the SAVE? display will need to be acknowledged using the **Enter** key before calibration will take effect.

> **Note:** The SAVE? prompt is not displayed if no changes have been made to the scaling.

Low-Flow Cutoff (CUTOFF)

The low-flow cutoff feature allows the meter to be programmed so that the often-unsteady output from a differential pressure transmitter at low flow rates always displays zero on the meter. The cutoff value may be programmed from 0.1 to 99999. The meter will display zero below the cutoff value. The cutoff can be disabled to display negative values.

Noise Filter (FILTER)

The noise filter is available for unusually noisy signals that cause an unstable process variable display. The noise filter averages the input signal over a certain period of time. The filter level determines the length of time over which the signal is averaged. The filter level can be set between 1 and 16 seconds or turned off. The higher the filter level, the longer the averaging time and so the longer it takes the display to settle to its final value. Setting the filter level to off disables the filter function.

Noise Filter Bypass (BYPAS)

The noise filter bypass changes the behavior of the meter so that small variations in the signal are filtered out but large abrupt changes in the input signal are displayed immediately. The bypass value determines the minimum amount of signal change to be displayed immediately. All signal changes smaller than the bypass value are filtered or averaged by the meter. The noise filter bypass may be set between 0.1 and 99.9% of full scale.

Enabling Password Protection (PASSWRD)

The *Password* menu is used for programming security to prevent unauthorized changes to the programmed parameter settings.

To set a password, enter the *Password* menu and program a five-digit password. For instructions on how to program numeric values see *Setting Numeric Values* on page *34*.
Making Changes to a Password Protected Meter

If the meter is password protected, the meter will display the message LOCKED when the *Menu* button is pressed. Press the *Enter* button while the message is being displayed and enter the correct password to gain access to the menu. After exiting *Programming Mode*, the meter returns to its password protected condition.

Disabling Password Protection

To disable password protection, access the *Password* menu and clear the entered password either by pressing and holding the *Right Arrow* button until all digits reset to zero or manually changing all the digits to zero. When the **Enter** button is pressed, the meter will display UNLOCKED and will no longer require a password to access *Programming Mode*.

Note: If the meter is password protected and the password has been forgotten, the password may be overridden using the master password: **50865**

Programmable Function Keys User Menu (USER)

The *User* menu allows the user to assign the front panel function keys F1, F2, and F3, and the digital input (located on the input signal connector) to access some of the menus or to activate certain functions immediately (e.g. reset max & min, hold relay states, etc.). This allows the meter to be greatly customized for use in specialized applications.
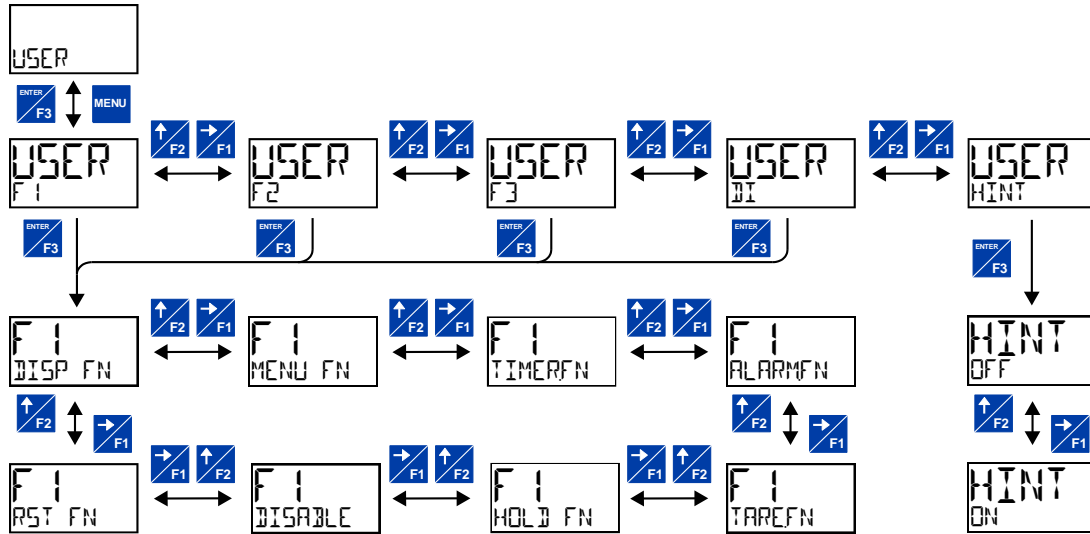

Tare (TARE)

The tare function zero's out the display. In the case of scale weight, tare is used to eliminate container weight and provide net weight readings. There are two tare functions; Tare and Reset Tare. When the tare function is used, the display reading is offset by the displayed amount to make the displayed value zero. Reset tare removes the display offset of the net value, and the gross and net values become the same until a new capture tare is entered.

Program a function key or the digital input for the tare and reset tare.

Before Tare   **After Capture Tare**   **After Reset Tare**
Function Keys & Digital Input Available Settings

Refer to the following table for descriptions of each available function key or digital input setting.

Display	Description
DISP FN	Set the function key or digital input to display a value
DISPLAY	Cycle max, min, and PV(s)
DISP PV	Display the PV
PCT PV	Display the PV's percentage of max (20 mA)
D UNITS	Display the PV's units
D TAG	Display the PV's tag
DISPMIN	Display the PV's minimum
DISPMAX	Display the PV's maximum
MIN MAX	Display the PV's minimum and maximum value
D mA IN	Display the mA input value
D mAOUT	Display the mA output value
MENU FN	Set the function key or digital input to access a menu
RLYINFO	Go to relay information menu (INFO)
MANCTRL	Go to output control menu (CONTROL)
TIMR OC1	Open collector 1 timer
TIMR OC2	Open collector 2 timer
TIMER R1	Relay 1 timer
TIMER R2	Relay 2 timer
TIMERFN	Set the function key or digital input to start or stop a timer
STRTALL	Start all timers
STOPALL	Stop all timers
SSTPALL	Start or stop all timers
OC1	Start/stop open collector 1 timer
OC2	Start/stop open collector 2 timer
RLY1	Start/stop relay 1 timer
RLY2	Start/stop relay 2 timer
START	Start the selected timer output
STOP	Stop the selected timer output
STR--STP	Start or stop the selected timer output
ALARMFN	Set the function key or digital input to acknowledge an alarm
ACK	Acknowledge all active alarms
SETPOINT	Set all output set point
SETPTOC1	Set open collector 1 set point
SETPTOC2	Set open collector 2 set point
SETPTR1	Set relay 1 set point

| Display	Description
SETPTR2	Set relay 2 set point
SWATCHFN	Set the function key or digital input to activate stopwatch
START	Start the stopwatch
STOP	Pause/Stop the stopwatch
STR--STP	Start or stop the stopwatch
TAREFN	Set the function key or digital input to tare the display value
TARE	Tare the display value
RST TARE	Reset the display value
HOLD FN	Set the function key or digital input to hold an output
HOLDOUT	Hold all outputs
HLDUNHLD	Hold or un-hold all outputs
OC 1+2	Hold/un-hold open collector outputs
RLY 1+2	Hold/un-hold relay outputs
mAOUT	Hold/un-hold 4-20 mA output
HOLD	Hold selected output
HLDUNHLD	Hold or un-hold selected output
DISABLE	Disable the function key or digital input
RST FN	Set the function key or digital input to reset a value
RESET	Reset min, max, or max/min PV value
R MINMAX	Reset max and min PV value

Enabling the Function Key Hint Feature (HINT)

Enabling the function key hint feature will cause a hint message to be displayed when pressing the F1, F2, or F3 function keys. This text gives a brief description of what the button is programmed to do. Pressing that function key a second time will execute that action.

The hint feature does not affect the digital input (DI) which is intended for immediate execution.

Changing System Settings (SYSTEM)

The System menu contains the following menus: *Analog Output Calibration*, *Restore Factory Defaults*, *Dual-Scale (PV2)*, *Backlight*, *Information*, and *Internal Calibration*.

Analog Output Calibration (AOUTCAL)

To perform the analog output calibration, it is recommended to use a milliamp meter with a resolution of at least 0.1 µA to measure the output current. The values saved internally during this procedure are used for scaling the 4-20 mA output in the *Setup* menu.

4-20 mA Output Calibration Procedure

1. Go to the *Advanced Features* menu and navigate to the SYSTEM menu and press Enter. Navigate to AOUTCAL and press Enter.

2. The display will show 4 mA. The Loop Leader+ mA output should now be close to 4 mA. Enter the actual value read by the digital mA meter on the second line of the display and press Enter.

3. The display will show 20 mA. The Loop Leader+ mA output should now be close to 20 mA. Enter the actual value read by the digital mA meter on the second line of the display and press Enter.

4. The Loop Leader+ will now calculate the calibration factors and store them.

5. Press Menu to exit.

Enabling the Dual-Scale Feature (PV2)
Dual-Scale Mode
Top Display: Toggling Between Process Variable and Units
Bottom Display: Toggling Between Process Variable (in different scale) and Different Units

For some level applications, such as displaying the height and volume of a tank, a second PV can be enabled which can be scaled to display a different value based on the same 4-20 mA input. This is accomplished by enabling the dual-scale feature (PV2).

When the dual-scale feature is enabled, additional menus will be displayed to allow for the programming of the second PV. The input menu will display PV1 and PV2 for scaling and the display menu will allow both PVs to be displayed on either line, for example. See *Display Functions & Messages* on page *29* for additional information on where additional dual-scale specific menus will appear.

PV2 must be enabled to use the Round Horizontal Tank feature. See *Round Horizontal Tank Linearization* (RH TANK) on page *59*.

Enabling or Disabling the Backlight (BACKLITE)

The backlight may be enabled or disabled using the Backlight menu. The backlight is enabled by default, but the input must be wired appropriately for the back-light to function. The backlight must be powered by an external power source. See *Wiring Diagrams* on page *24*. The voltage drop is the same if the backlight is not wired or if it is disabled in the *System* menu.

Viewing System Information (INFO)

System information, such as software (firmware) number and version, model number, and system tag, may be viewed in the INFO menu. Press the *Right Arrow* button to cycle through all available meter information. Press **Menu** to go back to the previous menu.

Calibrating the Internal mA Reference (ICAL)

| |
|---|
| The meter is factory calibrated prior to shipment to display 0.00 to 100.00, which corresponds to the 4-20 mA input. The calibration equipment is traceable to NIST standards. |

The use of calibrated signal sources is necessary to calibrate the internal source of the meter. The meter's internal source is what allows the user to scale the meter without applying a signal.

Check calibration of the meter at least every 12 months.

Note: Allow the meter to warm up for at least 15 minutes before performing the internal source calibration procedure.

The *Internal Calibration* menu is part of the *Advanced* menu. Internal Calibration is performed as follows:

1. Press the **Menu** button to enter *Programming Mode*.

2. Press the **Up-Arrow** button **twice** and press **Enter** to access the **Advanced** menu.

3. Press the **Up-Arrow** button and press **Enter** to access the **System** menu.

4. Press the **Up-Arrow** button and press **Enter** to access the **ICAL** menu.

5. The meter displays *low* input current message (4000 mA). Apply a 4 mA signal and press **Enter**. The display flashes for a moment while the meter is accepting the low input signal.

6. After the display stops flashing, the display moves to the *high* input calibration (20000 mA). Apply the high input signal and press **Enter**. The display will flash again while the meter is accepting the high input signal.

Apply 4-mA Signal | Apply 20-mA Signal

Display Flashes While Accepting Input

Display Flashes While Accepting Input
Meter Operation

The meter is equipped with four buttons behind the lower panel door used for operation of the meter.

Three buttons labeled F1, F2, and F3 can be programmed as function keys to perform a variety of meter functions with a simple push of a button. These include operation of the tare function, resetting the tare, resetting the meter's relays or open collectors, starting and stopping timers, and displaying max/min values. See *Function Keys & Digital Input Available Settings* on page *63* for a complete list of settings available.

A digital input is available on the meter and it may function in a similar fashion as the function keys to allow remote operation of a single task.

The max & min readings (peak & valley) reached by the process can be displayed either continuously by assigning it to a display line in the *Display* menu, or momentarily by pressing the F1 key (default) or assign it to any of the other function key or the digital input.

The relay information menu shows runtime and cycle count for each relay.

Change the display units within the selected unit class at any time without the need to re-scale the meter. Select the desired units via the ⊔⊓⌶⊤⩟ menu in the ⌶⎐⊏⌶⩟⊓ menu, and the meter automatically converts the display values to the new unit of measure.

Button Operation

Button Symbol	Description (Default Settings)
MENU **MENU**	Press to enter or exit *Programming Mode*, view settings, or exit max/min readings
NEXT **F1**	Press to display max/min readings.
UP **F2**	Press to reset max/min readings.
ENTER **F3**	Press to acknowledge all manually resettable relays or open collectors. Press to lock/unlock the display value after pressing the F1 key.

Note: Buttons are located behind the lower panel door of the meter. See *Programming Buttons* on page *28*.

Function Keys Operation

During operation, the programmable function keys operate according to the way they have been programmed in the *Advanced Features – User* menu. The table under *Button Operation* shows the factory default settings for F1, F2, and F3.

A hint message may be enabled to provide a description of what each function key does prior to executing their assigned function. See *Enabling the Function Key Hint Feature* (⊦⌶⊓⊤) on page *64.*

Digital Input Operation

A digital input is standard on the meter. This digital input is programmed identically to function keys F1, F2, and F3. The input is triggered with a contact closure between DI+ and DI-, or with an active low signal. During operation, the digital input operates according to the way it has been programmed in the *Advanced Features – User* menu.

Maximum/Minimum Readings

The max & min readings (peak & valley) reached by the process can be displayed either continuously or momentarily.

Display momentarily by pressing the F1 function key (default) or assigning to any of the other function keys or to the digital input in the *User* menu.

Display continuously by pressing the **Enter** button while the max/min is being displayed to lock the display. Press **Enter** again to unlock.

Any of the F1-F3 function keys (buttons) and the digital input can be programmed to reset the max & min readings. The meters are set at the factory to display the max reading by pressing the *Right Arrow/F1* button and to use the *Up-Arrow/F2* button to access the *Reset* menu. Press the *Right Arrow* button to cycle through the available parameters to reset.

Top Display: Process Value
Bottom Display: Max & Min
Runtime & Cycle Count (INFO)

The relay information menu shows runtime and cycle count for each relay. These values may be cleared at any time by selecting the *Clear* option (CLEAR?). If the cycle count or runtime values need to be changed on a frequent basis, it would be convenient to set up a front panel button or the digital input to simplify this process.

Note: See the menu tree under *Solid-State Relay Outputs* (RELAY) on page *46* for complete menu structure on this feature.

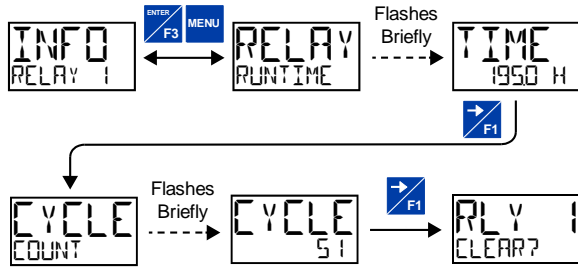

Meter displaying the amount of time a relay has been activated

Meter displaying the number of times a relay has cycled

Changing Engineering Units

During operation of the meter, it is possible to change the display units within the selected unit class without the need to re-scale the meter. The UNITS menu in the DISPLAY menu allows the unit of measure to be changed (e.g. from gallons/second (GAL/S) to liters/second (L/S)) and the meter will automatically convert the display values to the new unit of measure. If entering a custom unit (CUSTOM), a custom conversion factor will need to be entered. See *Changing the Engineering Units* (UNITS) on page *37*.

Troubleshooting

This product is a highly sophisticated instrument with an extensive list of features and capabilities. If the front panel buttons are used to program the meter, it can be a difficult task to keep everything straight. That is why we strongly recommend the use of the free MeterView XL software for all programming activities. A cable is provided to use the MeterView XL software for programming the meter.

If you have programmed the meter with the front panel buttons and it is not working as intended, try re-programming the meter using the MeterView XL software.

Reset Meter to Factory Defaults

When the parameters have been changed in a way that is difficult to determine what's happening, it might be better to start the setup process from the factory defaults. This can be accomplished using MeterView XL software or with the front panel buttons.

To load factory defaults:

1. Press the *Menu* button to enter *Programming Mode.*

2. Press the *Right-Arrow* button **twice** and press *Enter* to access the *Advanced* menu.

3. Press the *Up-Arrow* button and press *Enter* to access the *System* menu.

4. Press the *Right-Arrow* button and press *Enter* to access the *Default* menu.

5. Press *Enter* twice in quick succession. The meter will load default settings and restart.
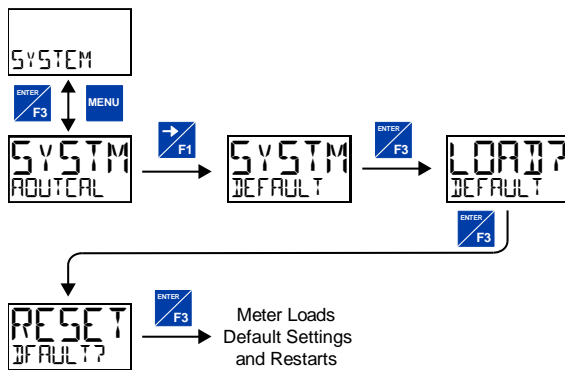

Determining Software Version

To determine the software (firmware) version of a meter:

1. Press the *Menu* button to enter *Programming Mode.*

2. Press the *Up-Arrow* button **twice** and press *Enter* to access the *Advanced* menu.

3. Press the *Up-Arrow* button and press *Enter* to access the *System* menu.

4. Press the *Up-Arrow* button **twice** and press *Enter* to access the *Info* menu.

5. Press the *Right-Arrow* button to cycle through the meter information. When done, press the *Menu* button to return to the previous menu or press & hold **Menu** to exit to Run mode.

Factory Default Settings

The following table shows the factory setting for most of the programmable parameters on the meter.

Parameter	Display	Default Setting
Input Menu		
Unit Class	UNITS	Volume
Unit of Measure	UNIT	Gallons
Input 1	INP 1	4.000 mA
Display 1	DSP 1	0.00
Input 2	INP 2	20.000 mA
Display 2	DSP 2	100.00
Output Menu		
Open Collector Output 1	OUTPUT 1	Disabled
Pulse Factor	FACTOR	1.0
Test Frequency	FREQ	100
Alarm	ALARM	PV
Alarm Action	ACTION	AUTO
Set Point	SET	20.00
Reset Point	RESET	10.00
Alarm On Delay	DELAY ON	0 seconds
Alarm Off Delay	DELAY OFF	0 seconds
Alarm Fail-safe	FAILSAFE	OFF
Red LED	RED	ON
Flash PV	FLASH	ON
Alarm Message	MSG	ON
Message Text	MSG EDIT	ALARM 1
Timer Off Delay	OFF.DLAY	1 minute
Timer On Time	ON TIME	1 second
Timer Mode	MODE	Continuous
Open Collector Output 2	OUTPUT 2	Disabled

Bottom Display	BOTTOM	Units
Signal Conditioning Function	FUNCTION	Linear (2 pts)
Low Cutoff	CUTOFF	Enabled: 0

Troubleshooting Tips

Certain sequences of events can cause unexpected results. To solve these issues, it is best to start fresh from factory defaults and use the manual as a step by step programming guide, rather than a random approach to programming. See *Reset Meter to Factory Defaults* on page *68* for details on resetting the meter to factory defaults. In addition, for best results, we recommend using the free MeterView XL software for all programming needs.

Symptom	Check/Action
No display at all	Check 1. The 4-20 mA current loop is providing at least 3.5 mA to the meter. 2. The voltage drop of all devices connected to the 4-20 mA current loop does not exceed the max rating of the loop power supply.
Not able to change setup or programming, LOCKED is displayed	Meter is password-protected, enter correct five-digit password to unlock.
Meter display flashes: 1. 99999 2. --9999	Check that the number of digits required for the scaled value does not exceed the maximum digits for the display line. If it does, try adjusting the decimal point location for less precision or changing the PV display to the bottom display.
Display is unstable	Check: 1. Input signal stability and value. 2. Display scaling vs. input signal. 3. Filter and bypass values (increase).
Display response is too slow	Check filter and bypass values
Display reading is not accurate	Check: 1. Input signal conditioner selected: Linear, square root, etc. 2. Scaling or calibration
Display does not respond to input changes, reading a fixed number	Check display assignment. It might be displaying max, min, or set point.
Display shows: 1. MAX and a number 2. MIN and a number	Press Menu to exit max/min display readings.
Relay operation is reversed	Check fail-safe settings in *Output* menu
Relays do not respond to signal	Check: 1. Relay action in *Output* menu 2. Set and reset points 3. Check manual control menu
If the display locks up or the meter does not respond at all	Cycle the power to reboot the microprocessor.
Other symptoms not described above	Call Technical Support for assistance.
